

# ROS Support from MATLAB

**ROSCon Chicago**  
**September 2014**

**Ren Sang Nah**  
**Yanliang Zhang**  
**Remo Pillat**

# Agenda

- Introduction
- Motivations
- Key features
- Demonstrations

# MATLAB ROS I/O Package

## A Downloadable MATLAB Add-On

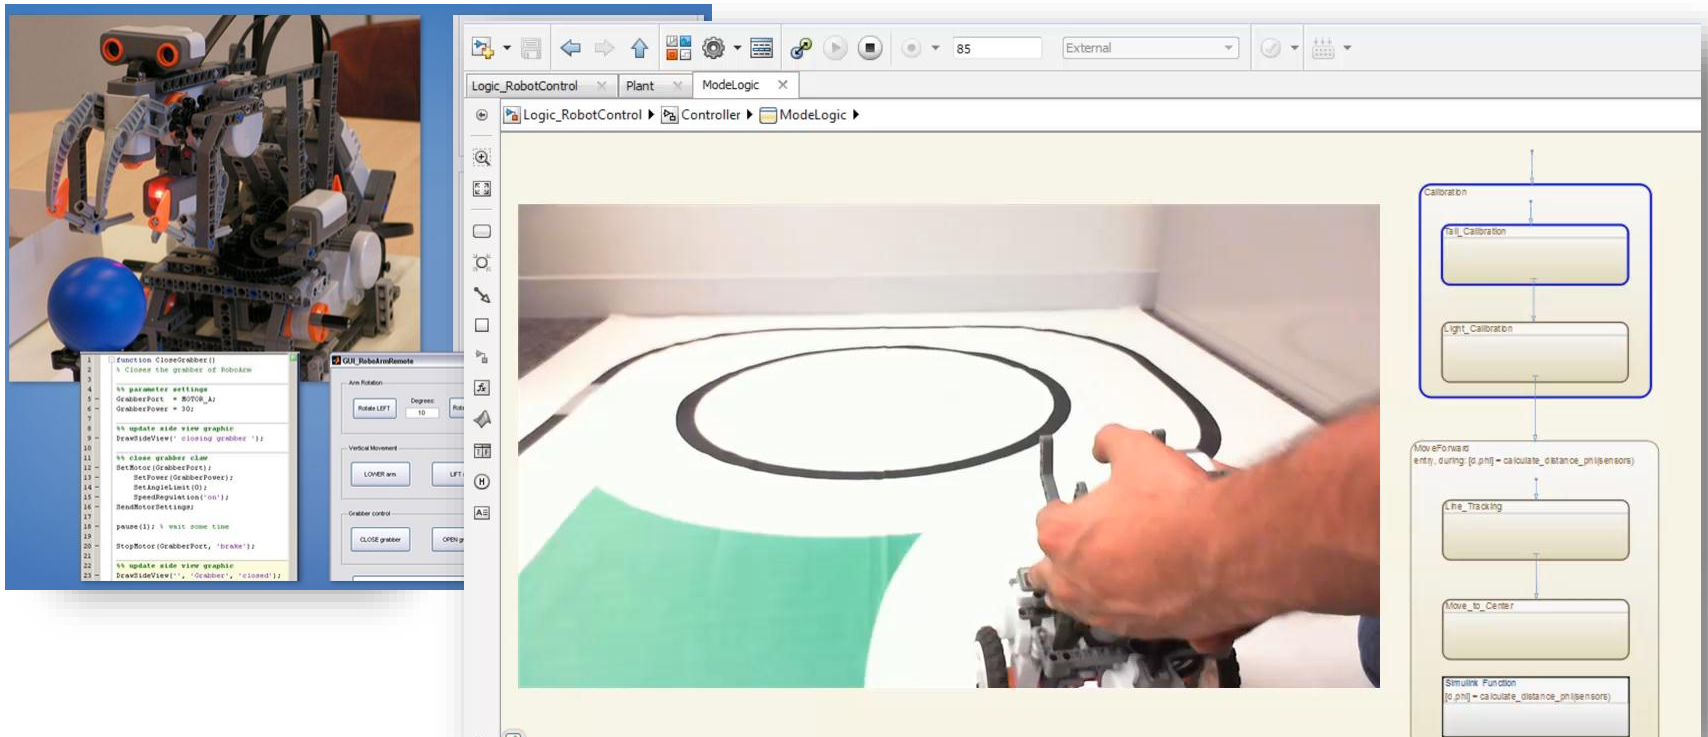

- MATLAB based API for interacting with ROS
- Create ROS nodes directly in MATLAB
- Exchange data via publishers and subscribers
- Capable of launching ROS core to create a standalone ROS network within MATLAB
- Examples for working with TurtleBot and Gazebo
- Available for **R2012b**, **R2013a**, **R2013b**, and **R2014a**
- Supports Windows, Linux, and Mac OS X

# MATLAB in Robotics

**Commercial  
and  
Academia**

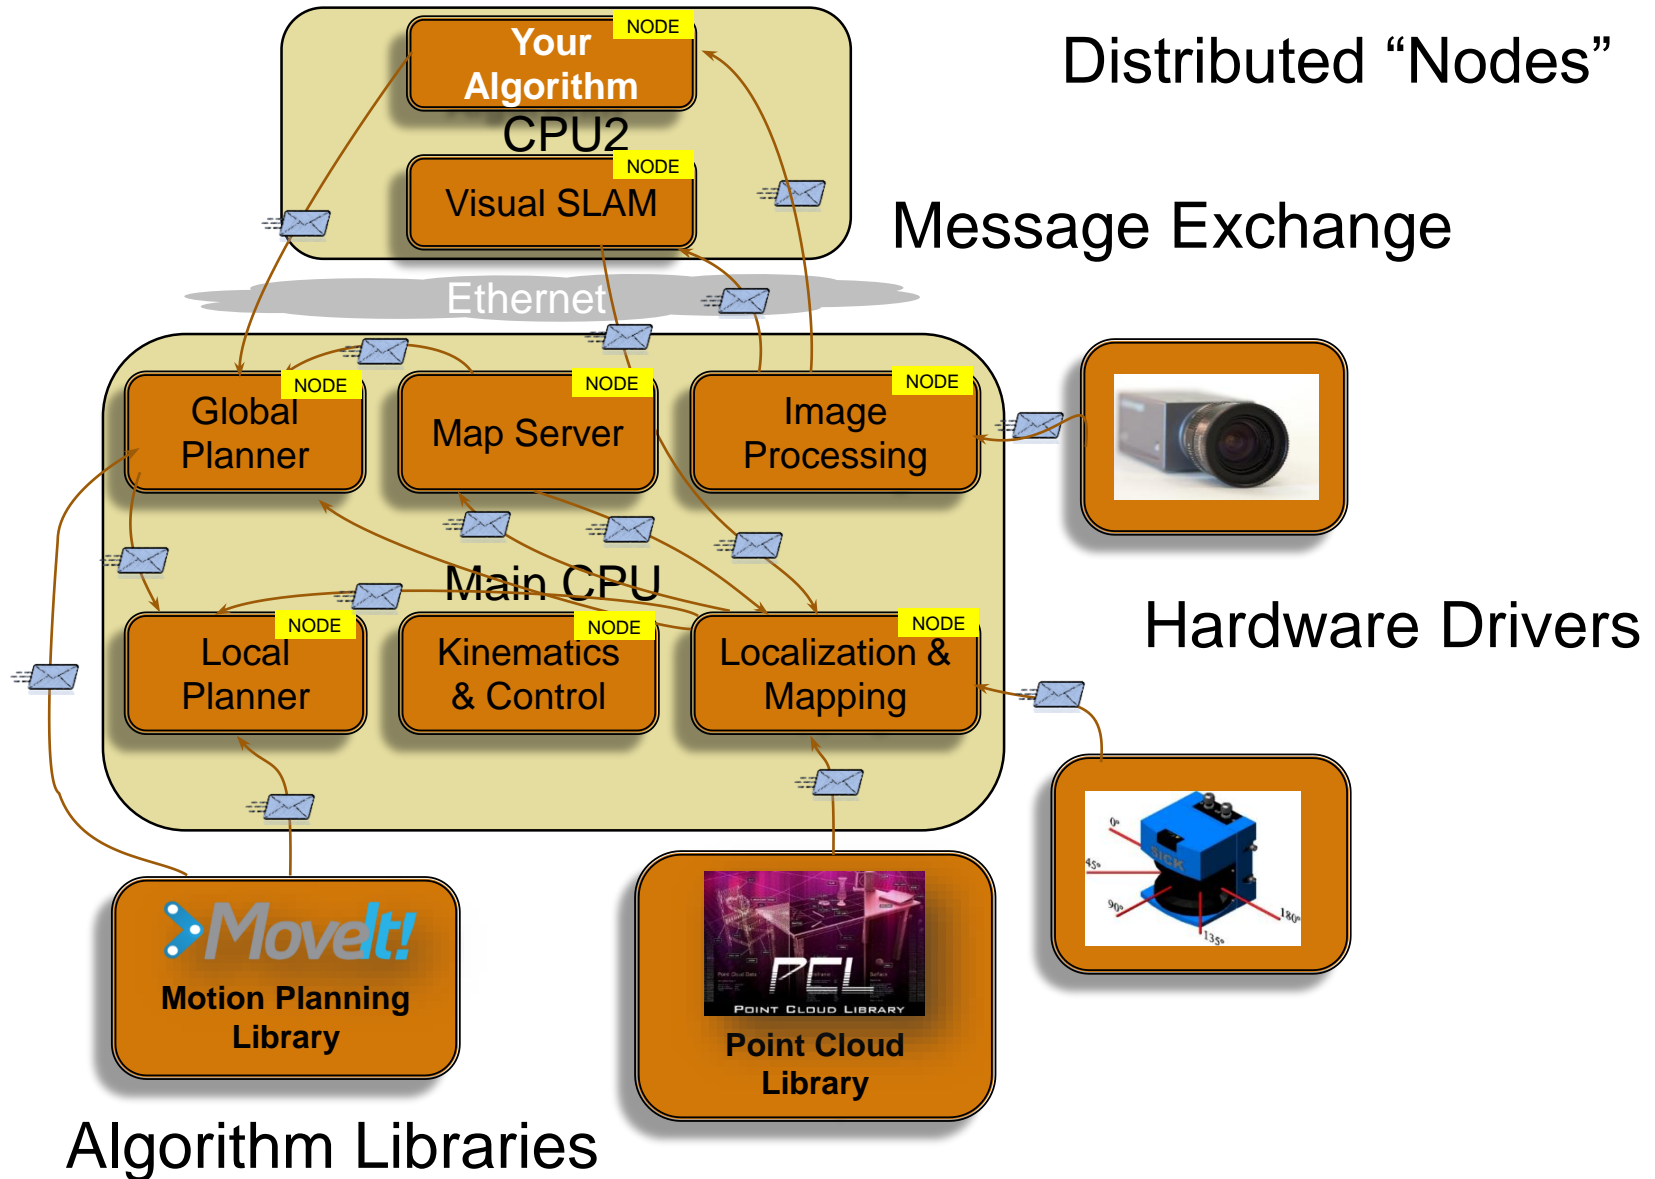

A powerful tool for:

- Data processing & visualization
- Algorithm design & prototyping

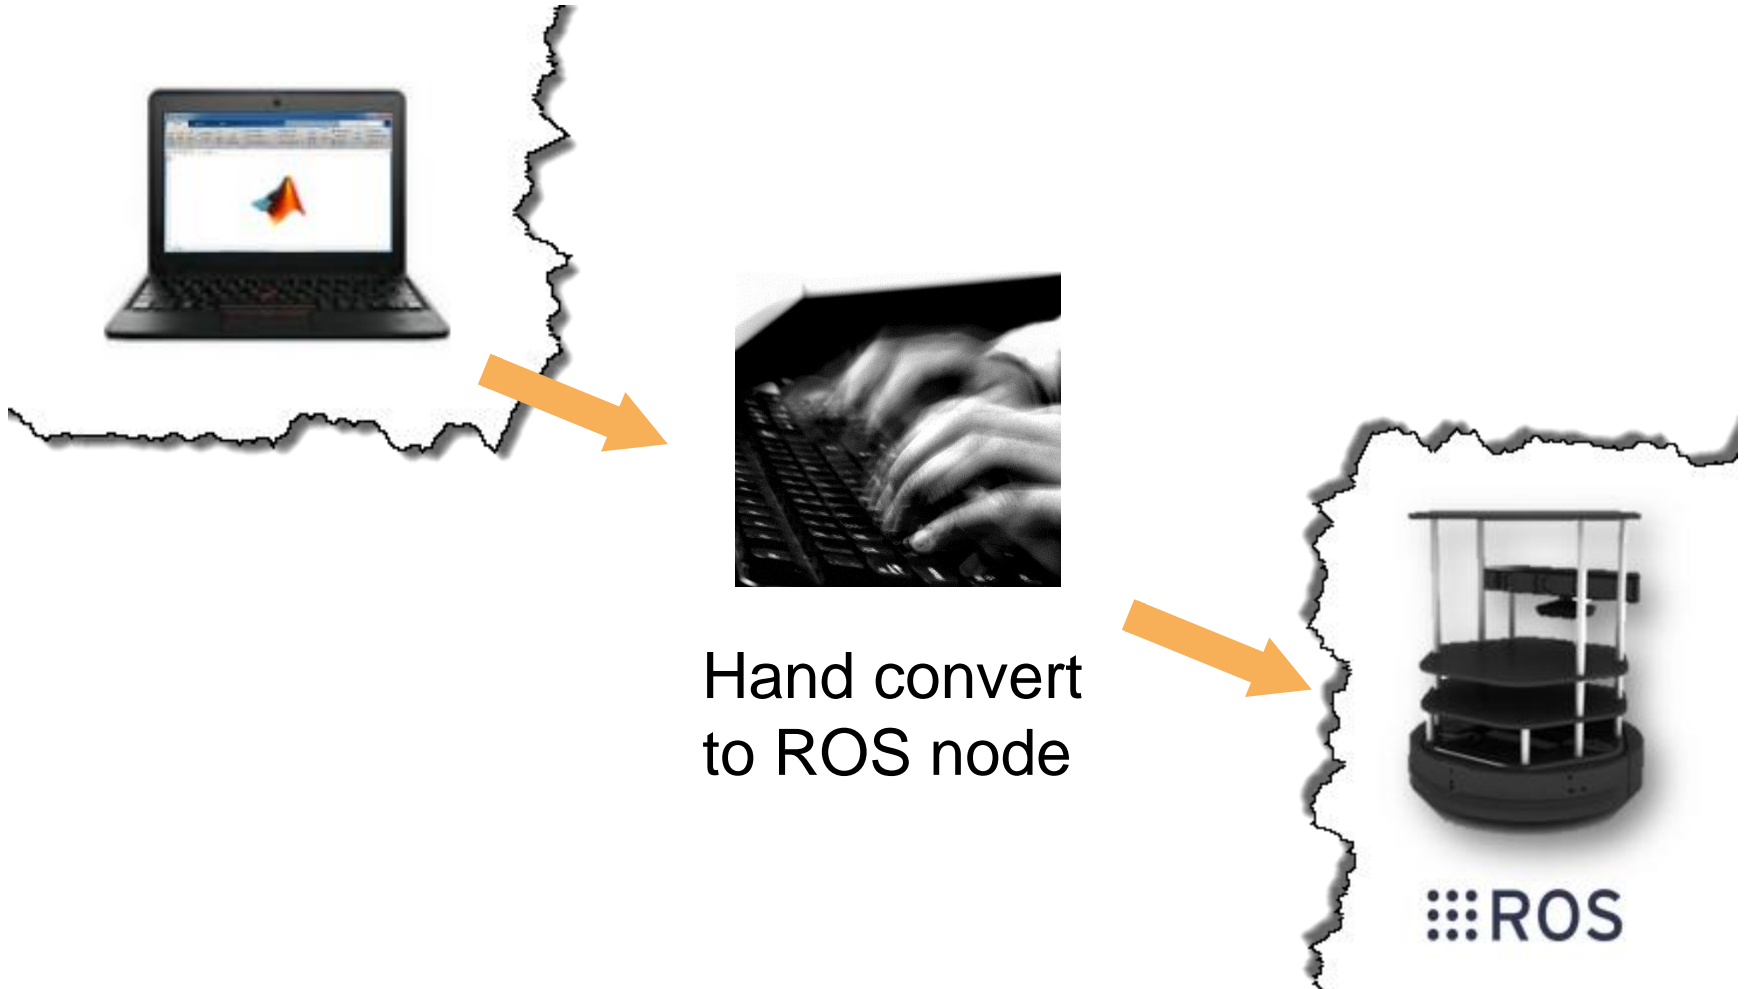

The image is a composite showing the application of MATLAB in robotics. On the left, a LEGO Mindstorms robot is shown with a blue ball. In the center, a MATLAB Simulink interface is displayed, showing a Simulink model of a robot control system. The Simulink model includes a 'Logic\_RobotControl' block, a 'Plant' block, and a 'ModelLogic' block. The Simulink diagram shows a sequence of blocks: 'Calibration' (containing 'Tail\_Calibration' and 'Light\_Calibration'), 'MoveForward' (with a comment 'entry, during [0:pi] = calculate\_distance\_pi(sensors)'), 'Line\_Tracking', 'Move\_to\_Center', and 'Simulink Function' (with a comment '[0:pi] = calculate\_distance\_pi(sensors)').

*Design and Test*

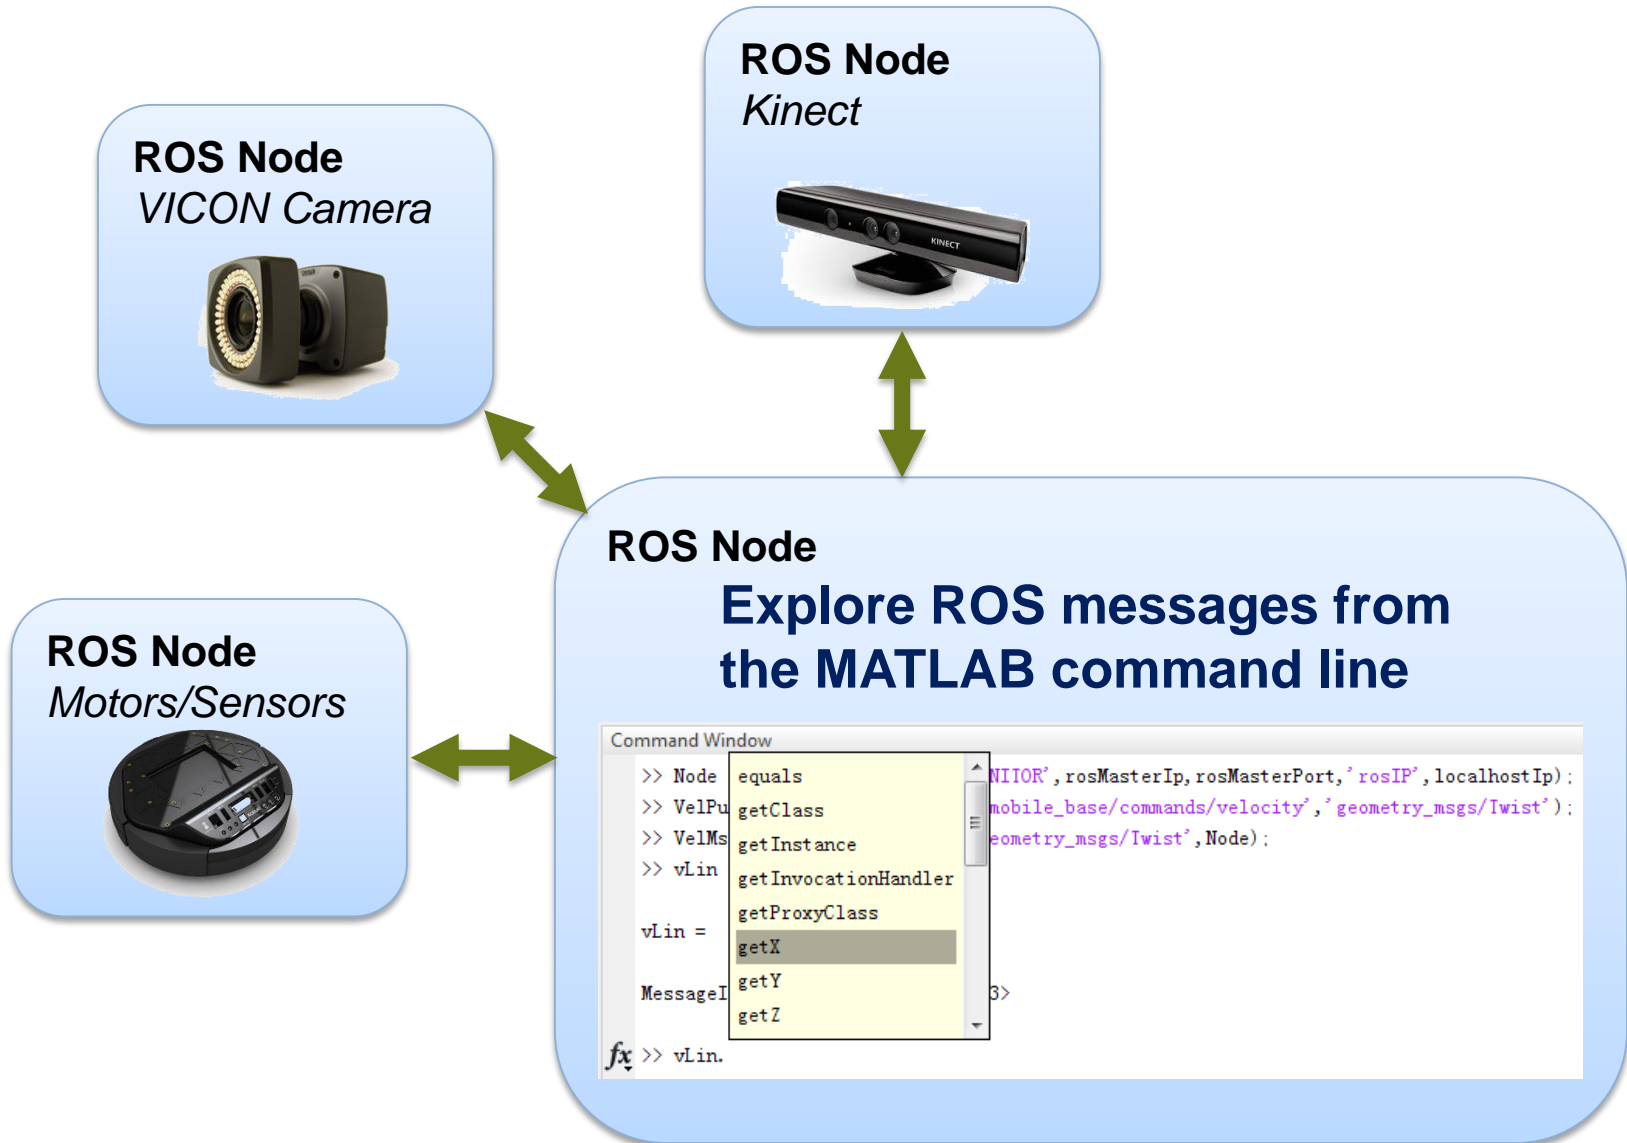

# Key Capabilities

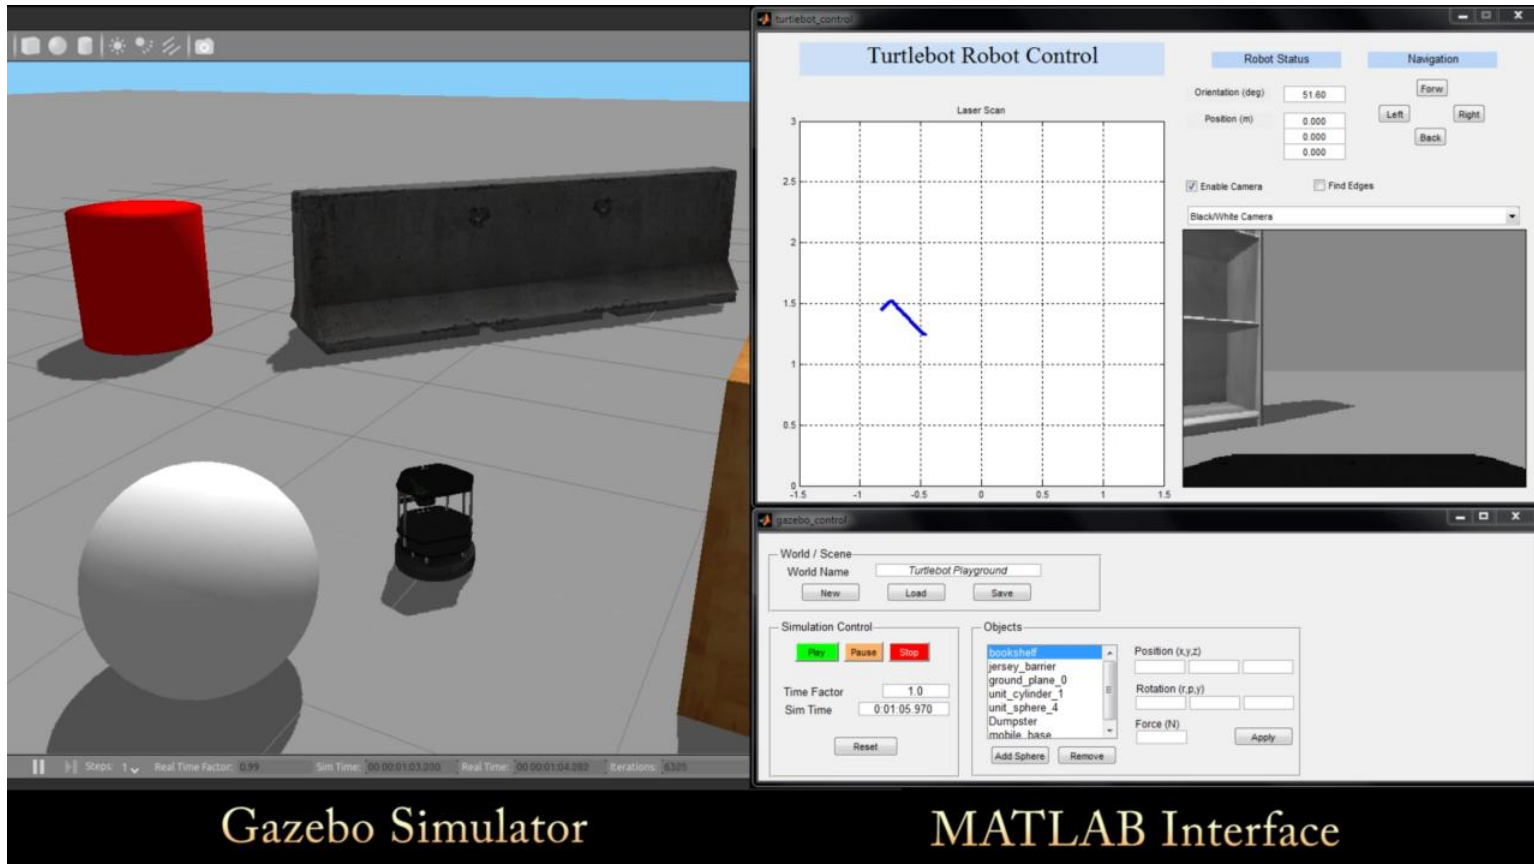

- Accelerate creation of ROS-based applications
- Allow developers to
  - Focus on developing the algorithm
  - Prove concepts against ROS-enabled robots effortlessly
- Useful for:
  - Interactive exploration of ROS messages
  - Interfacing with ROS-based simulators
  - Interfacing with ROS-based robots

# Interactive Exploration of Robot Data

# Interfacing with Simulator

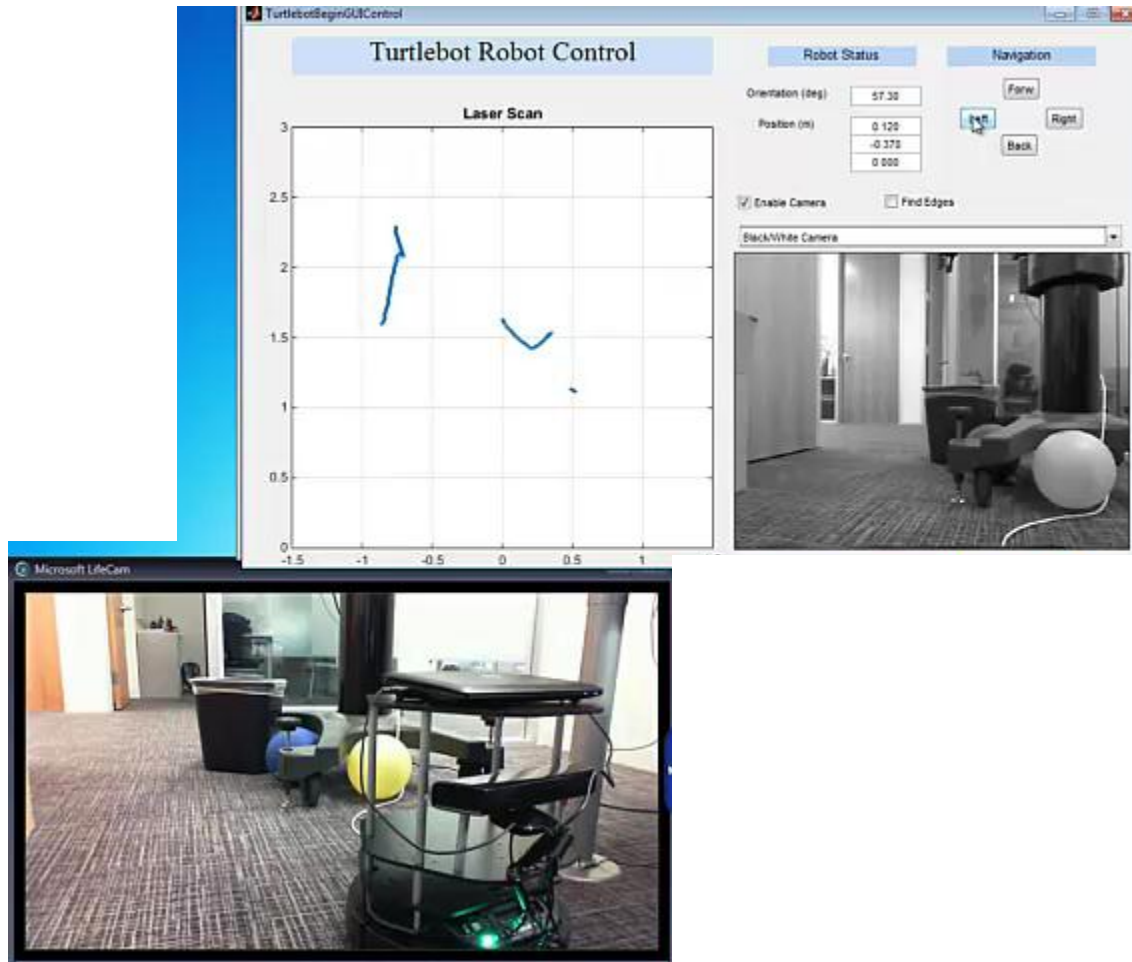

Gazebo is a 3D robot simulator commonly used with ROS

Gazebo Simulator

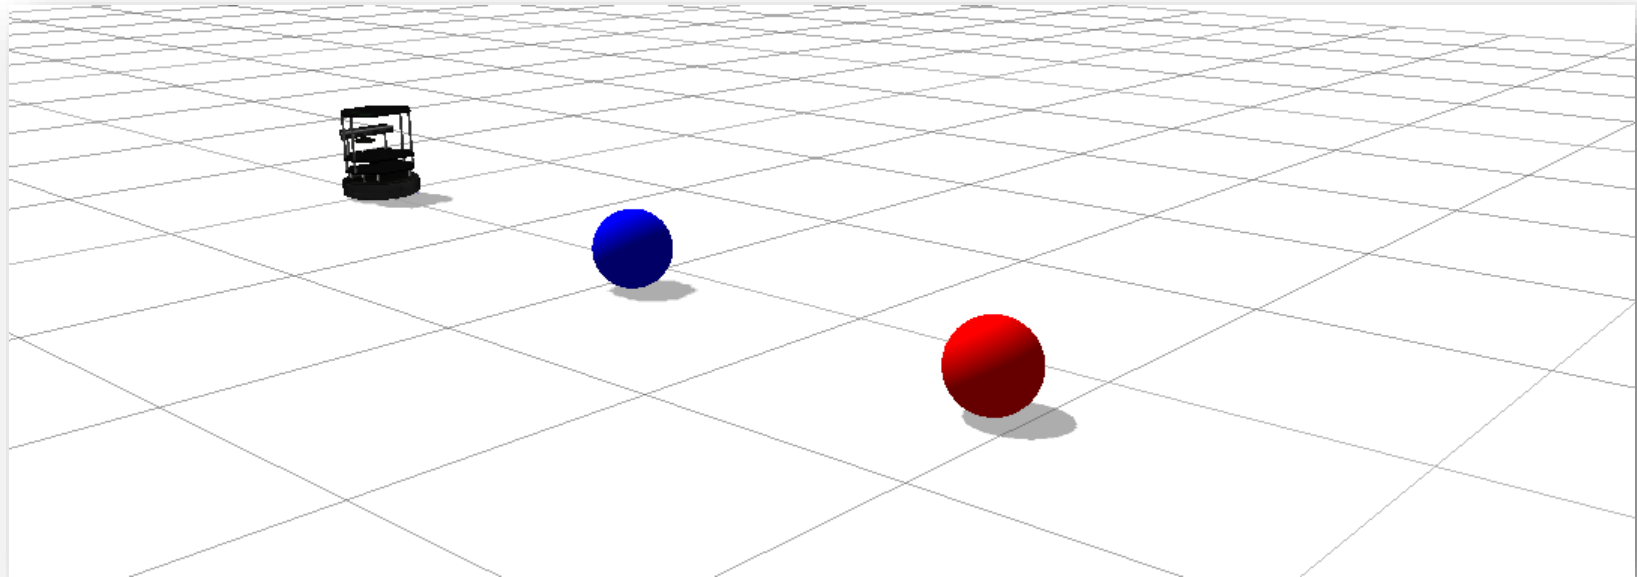

MATLAB Interface

# Interfacing with Real Robot

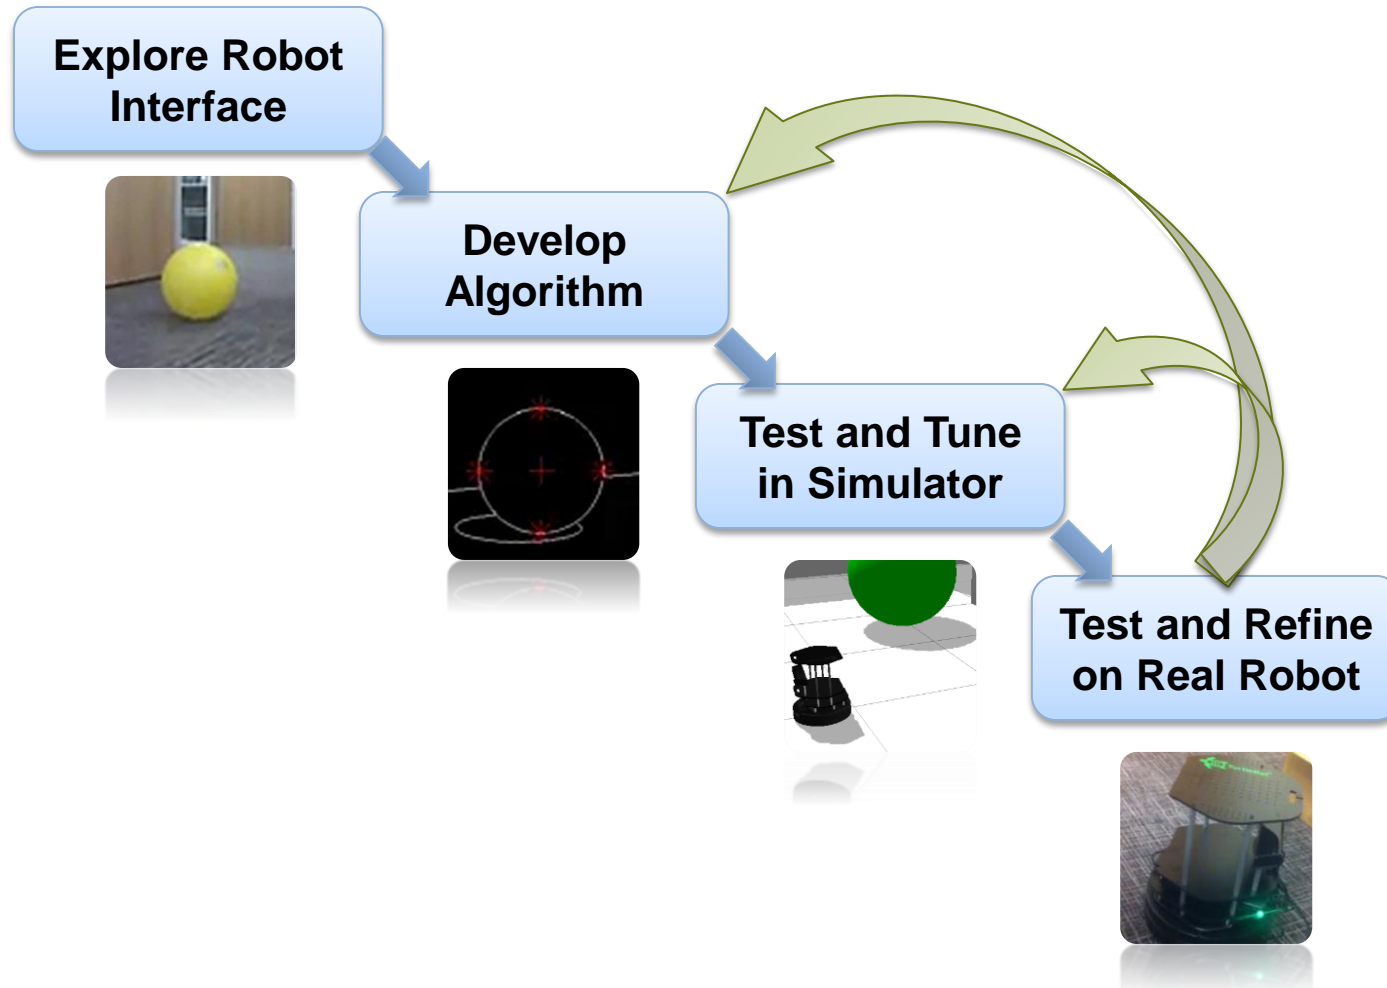

# Demonstration

- Algorithm must detect a ball within robot camera view
- Robot must maintain a constant distance from the ball
- Image processing and motion control are all performed in MATLAB

# Workflow Overview

# Tuning a Ball Tracking Algorithm

# Demo Setup

## ROS Network for the Teleoperated Robot

## ROS Network for the Ball Tracking Robot

# ROS Network for the Teleoperated Robot

# ROS Network for the Ball Tracking Robot

# Closing Remarks

- Allow MATLAB/ROS users to take advantage of both
  - Power of MATLAB in data analysis and algorithm design
  - Flexibility of ROS in handling a network of applications
- Enable multi-platform access to ROS from MATLAB
- Available for download at official MathWorks website
  - <http://www.mathworks.com/ros>
  - Search for “MATLAB ROS”
- Hands-on IROS Workshop
  - How to Use MATLAB-ROS Interface to Prototype Robotics Algorithms for ROS-Powered Robots
  - Demonstrations by Clearpath Robotics & Rethink Robotics
  - Sunday Sep 14, 1:30 pm to 5:00 pm
