

Introducing Intel® RealSense™
Robotics Innovation Program – ROS Integration

**Amit Moran, Gila Kamhi,
Artyom Popov, Raphaël Groscolt**

**Perceptual Computing - Advanced
Technologies Israel**

Agenda

- Intel RealSense – intro
- Intel RealSense Robotics Innovation program
 - What is it, what is our goal and how we are planning to achieve it
- Summary
- Questions

Intel® RealSense™ Technology

Add “Senses” to the “Brain” :

*Eyes, Ears, Voice, Touch, Emotion and **Context***

for an immersive, intuitive and exciting life-like experience

Short Range/Long Range

Intel® RealSense™ Short Range 3D Camera (F200)

	Color	Depth (IR)
Active Pixels	1920x1080	640x480
Aspect ratio	16:9	4:3
Frame rate	30/60/120 FPS	30/60/120 FPS
Field of view (D x V x H) (Cone)	77x43x70	90x59x73
Effective Range	-	0.2m – 1.2m

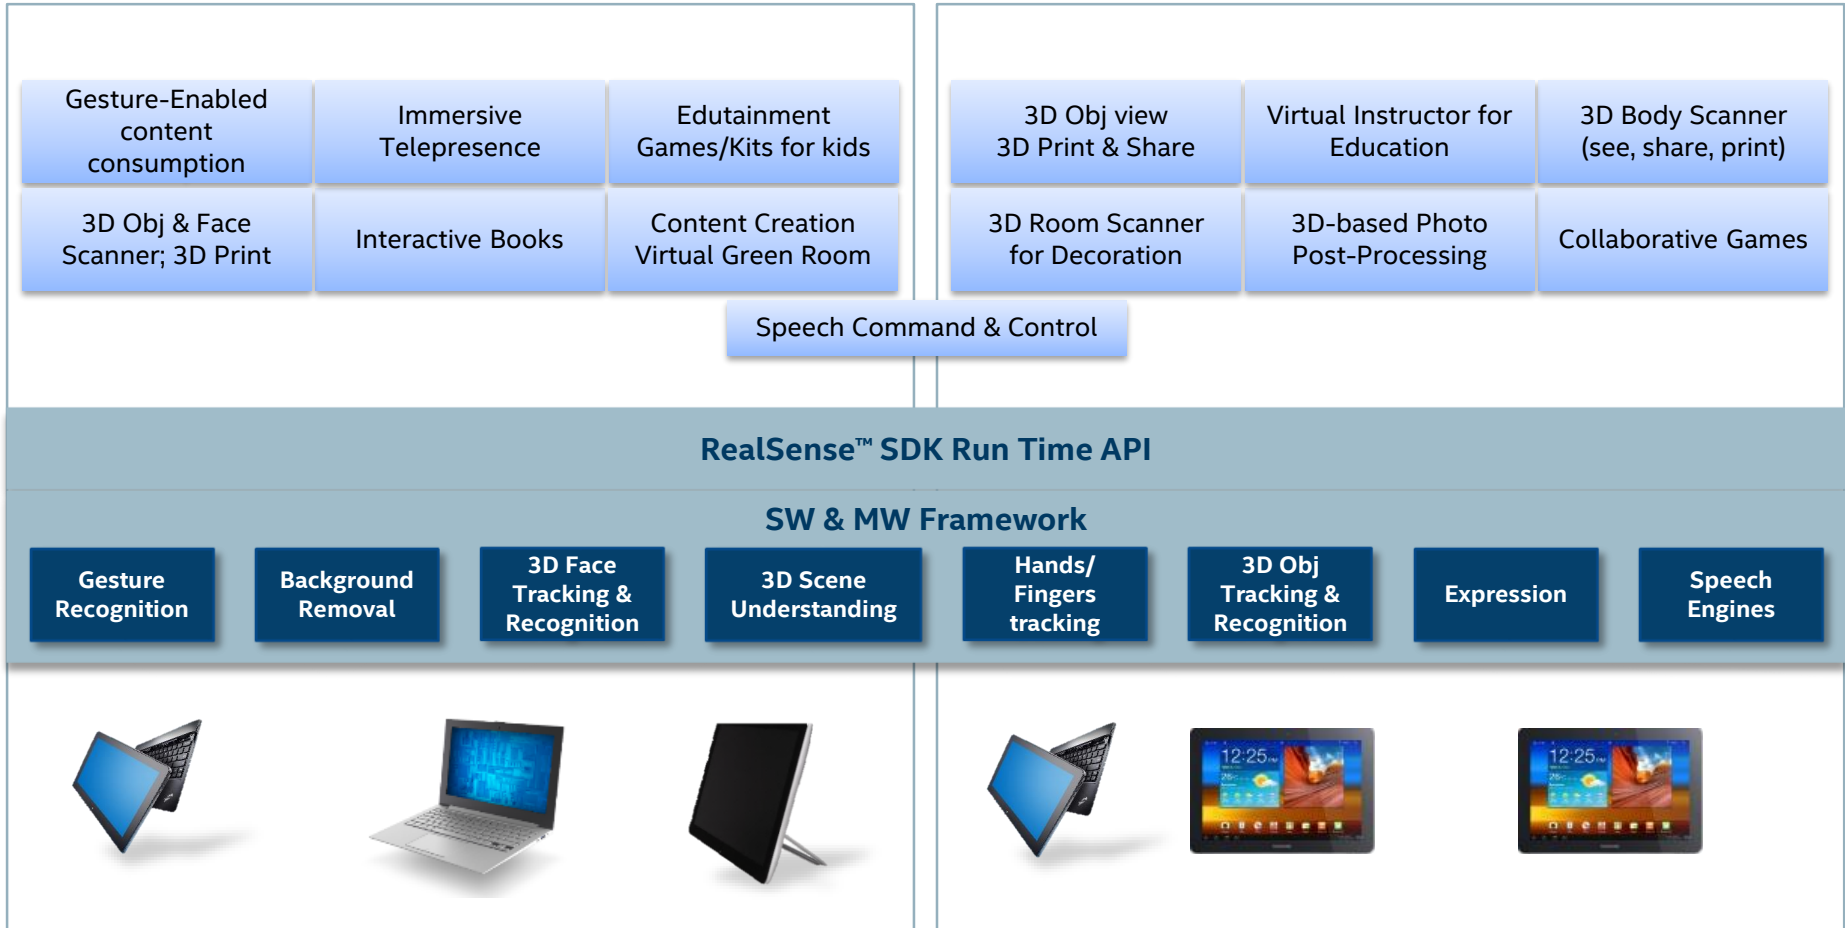

Intel® RealSense™ Long Range 3D Camera (R200)

	Color	Depth (IR)
Active Pixels	1920x1080	640x480
Aspect ratio	16:9	4:3
Frame rate	30 FPS	30/60/90 FPS
Field of view (D x V x H) (Cone)	77x47x70	70x46x59
Effective Range	-	0.6m – 3.5m*

*For outdoors use cases, depth is reported at a greater range (up to about 10 m) with lower accuracy.

Intel® RealSense™ SDK

Wearables**

From Human – Computer Interaction to Human – World Interaction

Robots and Wearables are ultimate hardware platforms for Perceptual Computing Technologies driving this revolution

Intel® RealSense™

Robotics Innovation Program

- A strategic program, aiming to develop technology to support ***rapid cycles of innovation*** in the robotic world of research, focused on Intel® RealSense™ Technology

- Our Goal:

Support **YOU** in your quest to innovate and create the next big thing in robotics

Intel® RealSense™ Technology - ROS Integration

Intel® RealSense™ Robotics Innovation Program

- RealSense-ROS pilots has been kicked off in April'15 with select universities
 - Gathered feedback and requirements
- A lot of traction...
 - Our offering available to all ROS community - announcement made by our CEO @IDF15

<http://wiki.ros.org/RealSense>

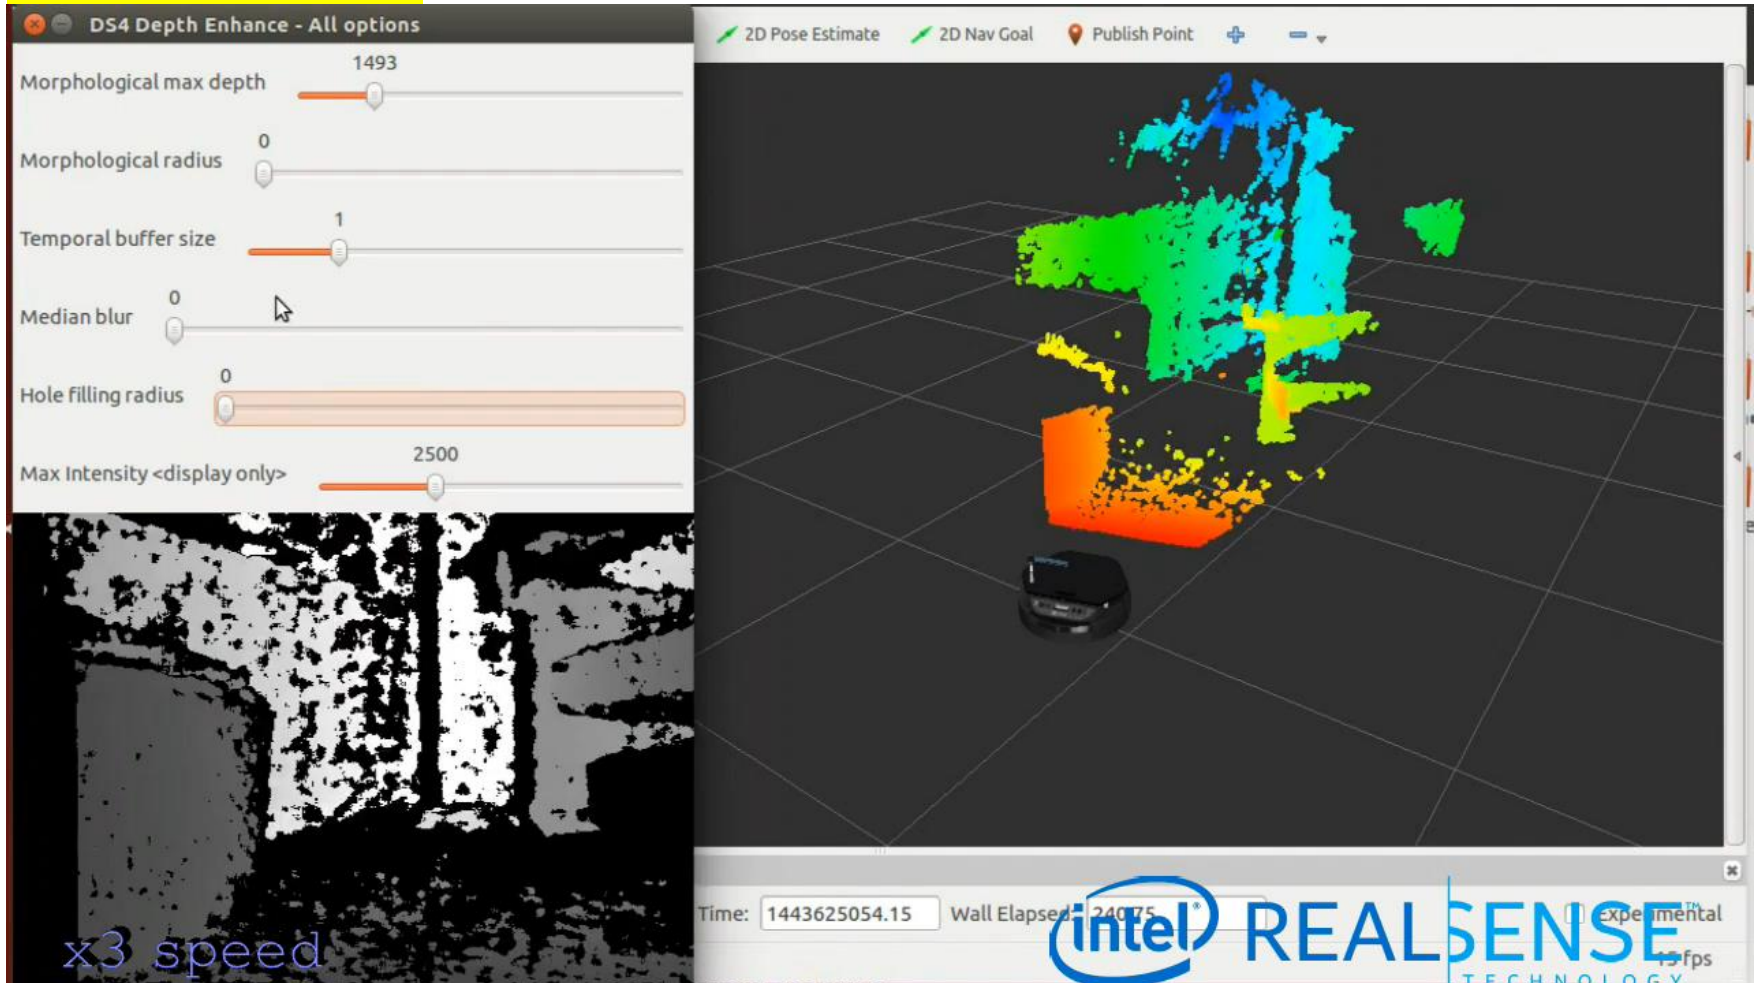

Intel® RealSense™ Technology - ROS Integration

- Camera access
 - RGB, Depth, IR, PointCloud
- CV basic modules
 - Plane analysis, Depth enhancements, Blob detection...
- Advanced modules
 - Person detection and tracking, skeleton tracking, gestures, object recognition, localization and mapping, scanning...

Outside

The screenshot displays the Intel RealSense software interface. At the top, a toolbar includes icons for 'Interact', 'Move Camera', 'Select', 'Focus Camera', 'Measure', '2D Pose Estimate', '2D Nav Goal', and 'Publish Point'. Below the toolbar, there are three main panels:

- Top Left:** A window titled 'Image' showing a high-contrast, black and white binary image of a scene.
- Bottom Left:** A window titled 'Image' showing a live video feed of a person in a light blue shirt and khaki pants standing on a wooden deck in an outdoor setting.
- Right:** A large window showing a depth map of the scene, with the person and background elements rendered in shades of cyan and blue against a black background.

At the bottom of the interface, a 'Time' panel displays performance metrics:

- ROS Time: 1443684806.27
- ROS Elapsed: 2177.74
- Wall Time: 1443684806.34
- Wall Elapsed: 2177.74

Additional elements include a 'Reset' button, a 'x2 speed' indicator, and the Intel RealSense Technology logo in the bottom right corner.

Summary

There is huge pull to Intel RealSense technology in robotics community

RealSense has competitive advantage in comparison with other peripheral depth sensors

- Significantly small form factor
- Low weight
- Low cost
- Multi-range support; short (F200) and long (R200)
- Larger range support of lighting conditions
- Very rich technology engines that support mobile set-up
