`ros::spin()`

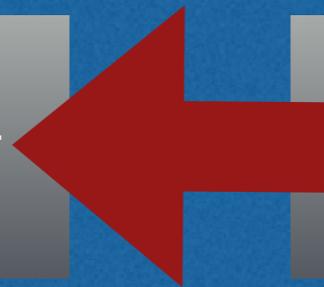

`controller_manager::update()`

`boost::asio::io_service()`

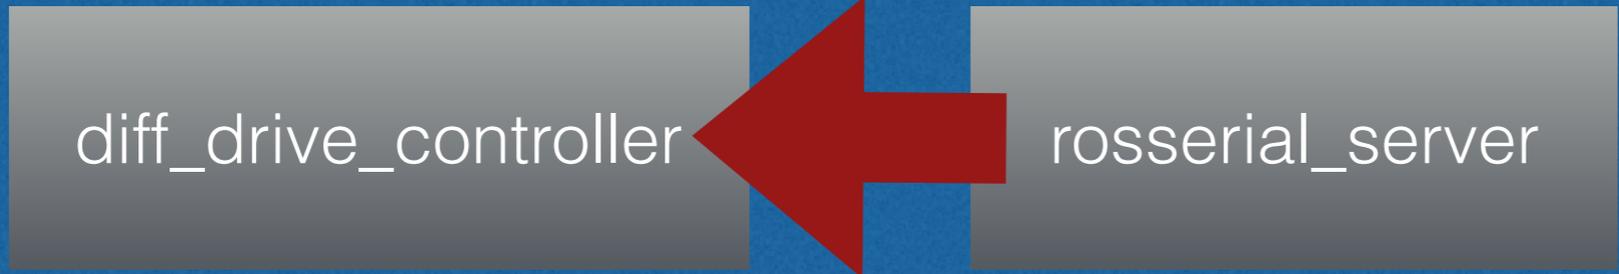

`diff_drive_controller`

`rosserial_server`

```
new roserial_server::SerialSession(io_service, port, 115200);  
boost::thread(boost::bind(&boost::asio::io_service::run, &io_service));  
  
controller_manager::ControllerManager cm(&jackal, controller_nh);  
boost::thread(boost::bind(controlThread, ros::Rate(50), &jackal, &cm));  
  
ros::spin();
```

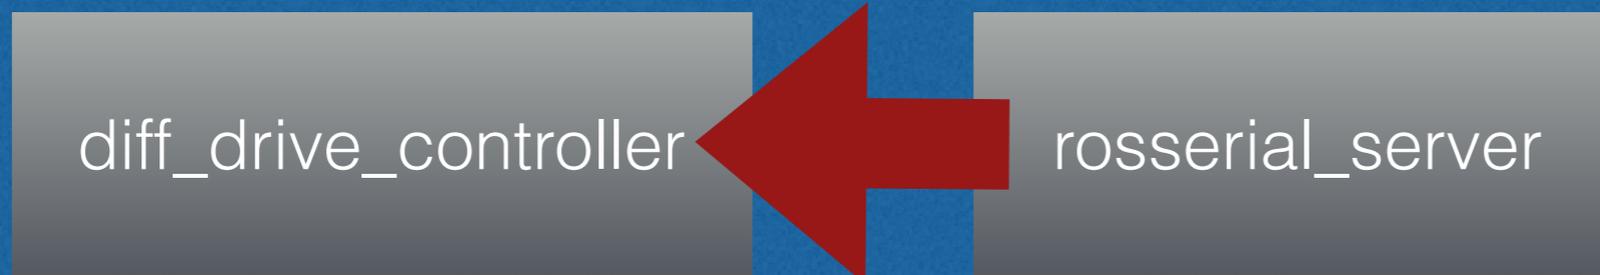

diff\_drive\_controller

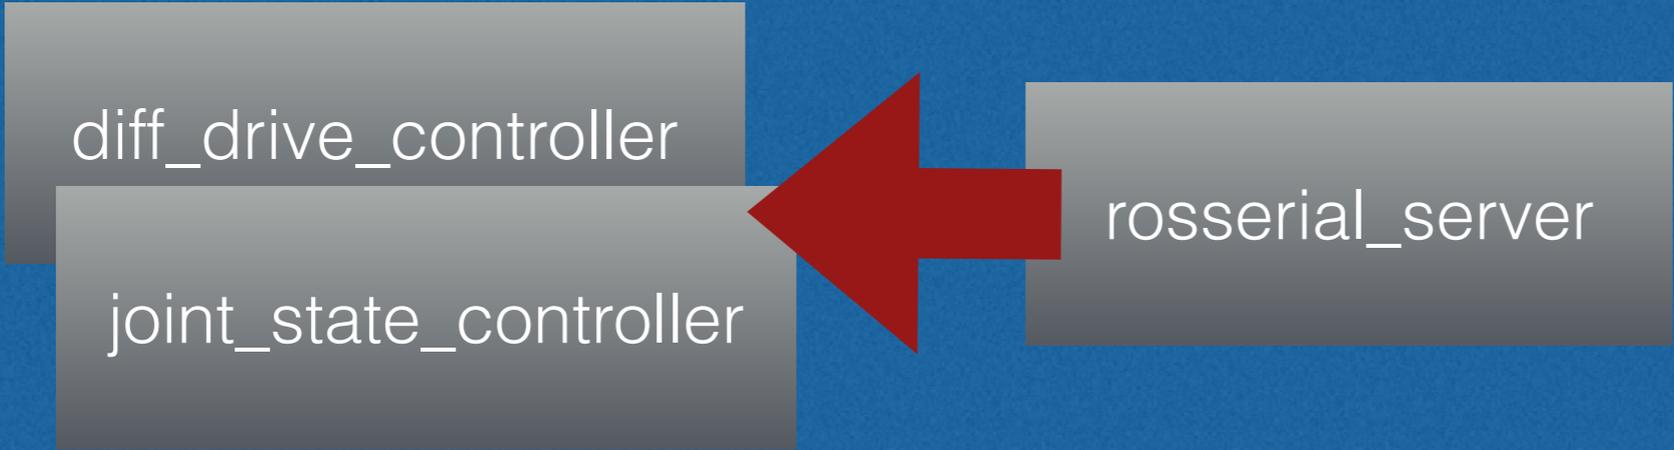

roserial\_server

```
void controlThread(ros::Rate rate, JackalRobot* robot,
controller_manager::ControllerManager* cm)
{
    ros::Time last_time;

    while (1)
    {
        ros::Time this_time = ros::Time::now();
        robot->copyJointsFromHardware();
        cm->update(this_time, this_time - last_time);
        robot->publishDriveFromController();
        last_time = this_time;
        rate.sleep();
    }
}
```

Now using other ros-control controllers!

```
graph LR; A[rosserial_server] --> B[diff_drive_controller]; A --> C[joint_state_controller];
```

diff\_drive\_controller

joint\_state\_controller

rosserial\_server

# DDS

serialization changes

catkin nested builds stay awesome

catkin testing stays awesome

integrating with ros-control stays awesome
