Q&A 5min

Establish Credibility 1min

- PhD Student At CU Boulder with Nikolaus Correll
- Interned with E. Gil Jones & Ioan Sucan at Willow Garage
 - Created Setup Assistant
- Have used and contributed to Movelt! since before it was released
- Am a Movelt! maintainer
- Have contributed to OMPL and many other ROS packages

Background of MoveIt! 5min

Easy to use framework for motion planning, manipulation, 3D perception, kinematics, control and navigation

- Created at Willow Garage by Ioan Sucan, Sachin Chitta, many others
- Collaboration between many organizations
- Predecessor: [arm_navigation](#) announced in March 2010
- 31 contributors to `moveit_core`
- Written in C++ with Python bindings
- <https://github.com/ros-planning/>

The First Movelt! Community Meeting (Online)

240 people registered, 150 who attended

It's popular.

- #3 Package in ROS (ROS survey)
- 700 Members on Mailing list
- Number of installations 2015: 10,089
- ICRA 2015
 - 11 Papers cited/used MoveIt!
- IROS 2015
 - 5 Papers cited/used MoveIt!
- Has been run on over 65 robots worldwide

Exciting Developments

- **Benchmarking getting rewrite**
 - Mark Moll / Kavraki Lab
- **STOMP being revived**
 - Jorge Nicho / SwRI
- **Descartes Cartesian Planner**
 - Shaun Edwards / SwRI
- **Collision detection plugin**
 - Michael Ferguson / Fetch
- **New release maintenance manager**
 - Michael Ferguson / Fetch

What it's done well 5min

Setup Assistant

What was your overall experience with the Setup Assistant?

MoveIt Setup Assistant

- Start
- Self-Collisions
- Virtual Joints
- Planning Groups
- Robot Poses
- End Effectors
- Passive Joints
- Configuration Files

Optimize Self-Collision Checking

The Default Self-Collision Matrix Generator will search for pairs of links on the robot that can safely be disabled from collision checking, decreasing motion planning processing time. These pairs of links are disabled when they are always in collision, never in collision, in collision in the robot's default position or when the links are adjacent to each other on the kinematic chain. Sampling density specifies how many random robot positions to check for self collision. Higher densities require more computation time.

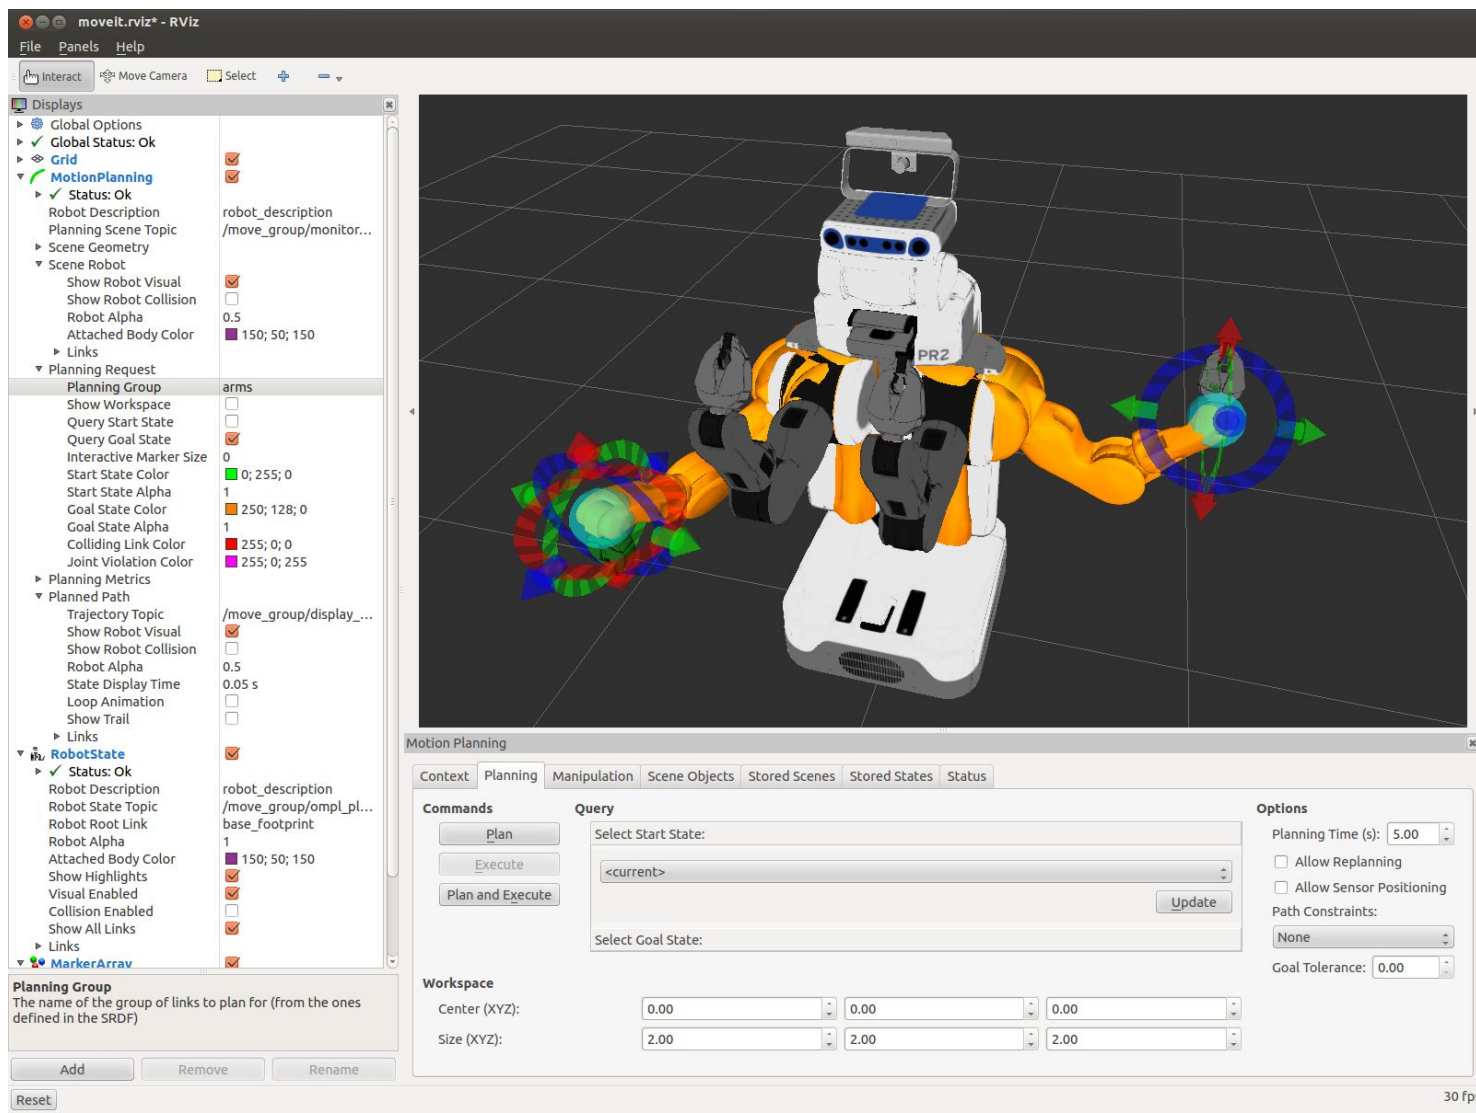

Sampling Density:
Low
High 10000

Regenerate Default Collision Matrix

	Link A	Link B	Disabled	Reason
1	backpack	base	☑	Never in Co
2	backpack	baseplate	☑	Never in Co
3	backpack	body_cover	☑	Collision by
4	backpack	left_shoulder_pitch	☑	Never in Co
5	backpack	left_shoulder_roll	☑	Never in Co
6	backpack	neck_base	☑	Never in Co
7	backpack	neck_lower_pitch	☑	Never in Co
8	backpack	neck_roll	☑	Never in Co
9	backpack	right_shoulder_pitch	☑	Never in Co
10	backpack	right_shoulder_roll	☑	Never in Co
11	backpack	waist_center	☑	Adjacent Li
12	base	baseplate	☑	Adjacent Li

Show Non-Disabled Link Pairs Min. collisions for "always"-colliding pairs: 95%

Rviz Motion Planning Plugin

The screenshot displays the Rviz Motion Planning Plugin interface. The main 3D view shows a PR2 robot model in a grid-based environment. A planned path is visualized as a series of colored spheres (green, blue, red, purple) connected by lines, representing the robot's trajectory. The interface includes several panels:

- Displays Panel:** Contains a tree view of the scene's visual elements. Key items include:
 - MotionPlanning:** Status: Ok, Robot Description: robot_description, Planning Scene Topic: /move_group/monitor...
 - Scene Robot:** Show Robot Visual (checked), Show Robot Collision (unchecked), Robot Alpha: 0.5, Attached Body Color: 150; 50; 150.
 - Planning Request:** Planning Group: arms, Show Workspace (unchecked), Query Start State (unchecked), Query Goal State (checked), Interactive Marker Size: 0, Start State Color: 0; 255; 0, Start State Alpha: 1, Goal State Color: 255; 128; 0, Goal State Alpha: 1, Colliding Link Color: 255; 0; 0, Joint Violation Color: 255; 0; 255.
 - Planned Path:** Trajectory Topic: /move_group/display..., Show Robot Visual (checked), Show Robot Collision (unchecked), Robot Alpha: 0.5, State Display Time: 0.05 s, Loop Animation (unchecked), Show Trail (unchecked).
 - RobotState:** Status: Ok, Robot Description: robot_description, Robot State Topic: /move_group/ompl_pl..., Robot Root Link: base_footprint, Robot Alpha: 1, Attached Body Color: 150; 50; 150, Show Highlights (checked), Visual Enabled (checked), Collision Enabled (unchecked), Show All Links (checked).
 - MarkerArray:** (checked).
- Motion Planning Panel:** Located at the bottom, it includes:
 - Context:** Planning (selected), Manipulation, Scene Objects, Stored Scenes, Stored States, Status.
 - Commands:** Plan, Execute, Plan and Execute.
 - Query:** Select Start State: <current>, Select Goal State: (empty), Update button.
 - Workspace:** Center (XYZ): 0.00, 0.00, 0.00; Size (XYZ): 2.00, 2.00, 2.00.
 - Options:** Planning Time (s): 5.00, Allow Replanning (unchecked), Allow Sensor Positioning (unchecked), Path Constraints: None, Goal Tolerance: 0.00.

Comparing research libraries

- **OMPL**
Open Motion Planning Library
- **SBPL**
Search Based Planning Library
- **CHOMP**
Covariant Hamiltonian
Optimization
- **STOMP**
Stochastic Trajectory
Optimization
- **FCL**
Fast Collision Checking Library

3D occupancy grid mapping

Robot Agnostic

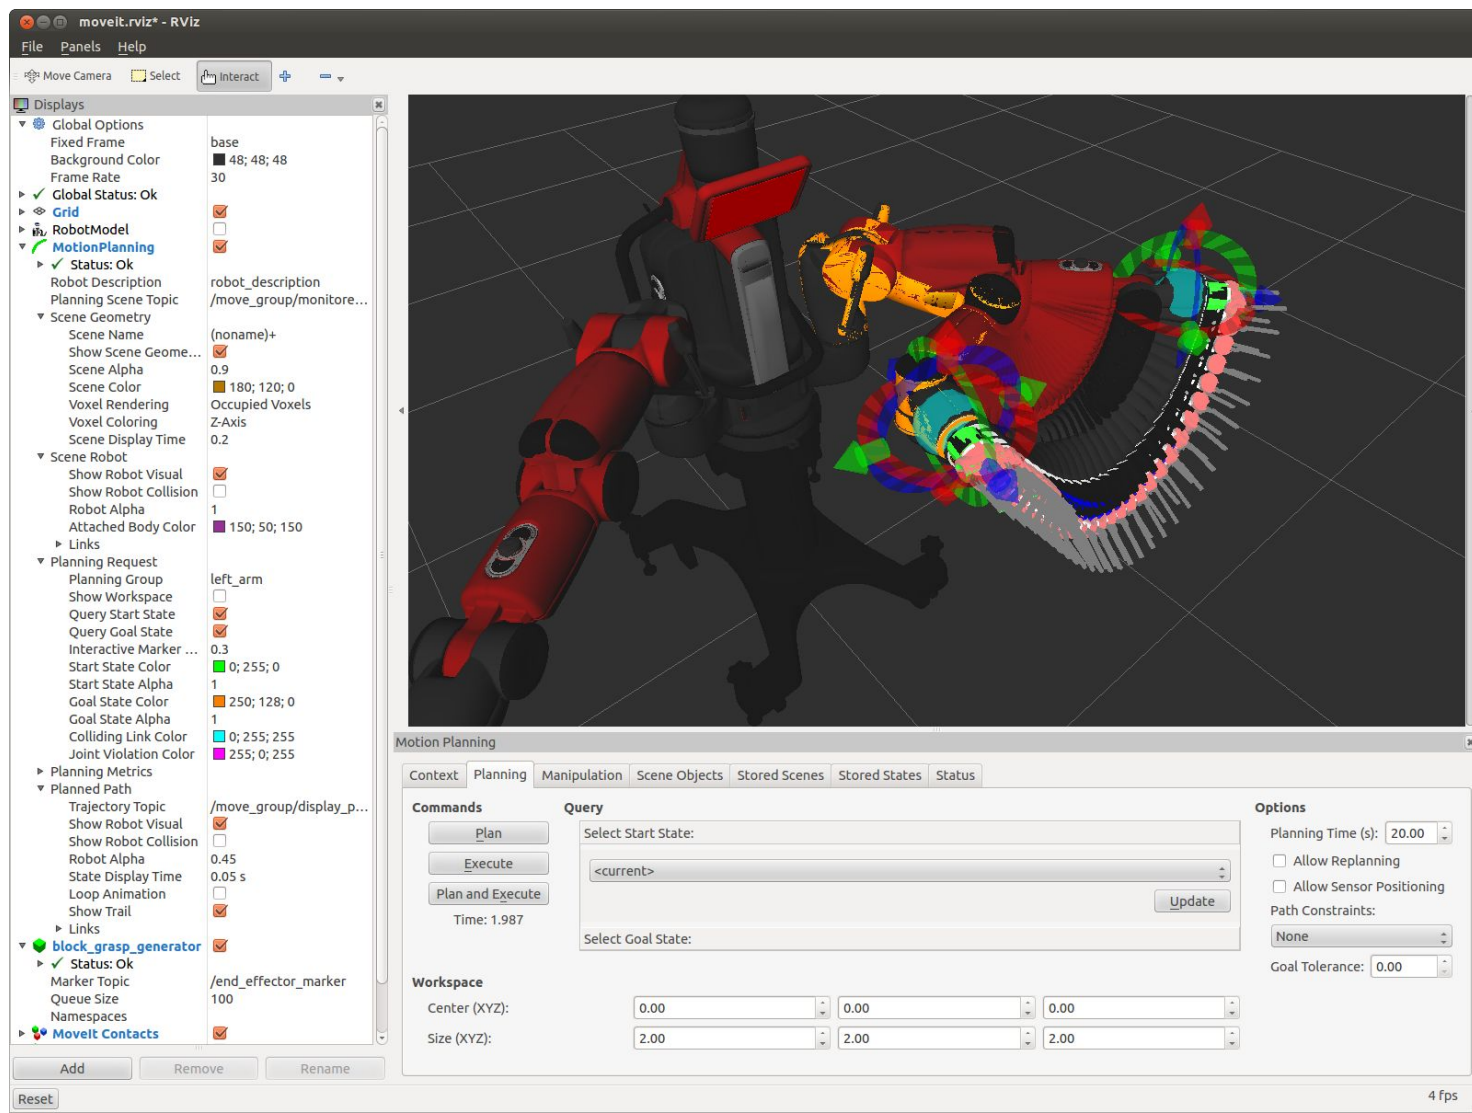

Flexibility (but also complexity)

- Can Handle:
 - Groups of joints
 - Multivariable joints
 - Mimic joints
- Notions of:
 - Cartesian-Space Planning
 - Joint-Space Planning
 - Orientation Constraints
 - Visibility Constraints

Typical Use Patterns 5min

Rviz Motion Planning Plugin

The screenshot displays the MoveIt! Rviz Motion Planning Plugin interface. The main window shows a 3D view of a robot arm with a planned path. The left sidebar contains configuration options for the MotionPlanning plugin, and the bottom panel shows the Motion Planning controls.

Displays Panel:

- Global Options
 - Fixed Frame: base
 - Background Color: 48; 48; 48
 - Frame Rate: 30
 - Global Status: Ok
- Grid:
- RobotModel:
- MotionPlanning:
 - Status: Ok
 - Robot Description: robot_description
 - Planning Scene Topic: /move_group/monitore...
 - Scene Geometry
 - Scene Name: (noname)+
 - Show Scene Geome...:
 - Scene Alpha: 0.9
 - Scene Color: 180; 120; 0
 - Voxel Rendering: Occupied Voxels
 - Voxel Coloring: Z-Axis
 - Scene Display Time: 0.2
 - Scene Robot:
 - Show Robot Visual:
 - Show Robot Collision:
 - Robot Alpha: 1
 - Attached Body Color: 150; 50; 150
 - Links
 - Planning Request
 - Planning Group: left_arm
 - Show Workspace:
 - Query Start State:
 - Query Goal State:
 - Interactive Marker...: 0.3
 - Start State Color: 0; 255; 0
 - Start State Alpha: 1
 - Goal State Color: 250; 128; 0
 - Goal State Alpha: 1
 - Colliding Link Color: 0; 255; 255
 - Joint Violation Color: 255; 0; 255
 - Planning Metrics
 - Planned Path
 - Trajectory Topic: /move_group/display_p...
 - Show Robot Visual:
 - Show Robot Collision:
 - Robot Alpha: 0.45
 - State Display Time: 0.05 s
 - Loop Animation:
 - Show Trail:
 - Links
 - block_grasp_generator:
 - Status: Ok
 - Marker Topic: /end_effector_marker
 - Queue Size: 100
 - Namespaces:
- MoveIt! Contacts:

Motion Planning Panel:

Context: Planning | Manipulation | Scene Objects | Stored Scenes | Stored States | Status

Commands: Plan, Execute, Plan and Execute (Time: 1.987)

Query: Select Start State: <current>, Select Goal State: [] (Update)

Options: Planning Time (s): 20.00, Allow Replanning, Allow Sensor Positioning, Path Constraints: None, Goal Tolerance: 0.00

Workspace: Center (XYZ): 0.00, 0.00, 0.00; Size (XYZ): 2.00, 2.00, 2.00

Commander

- > a = current
- > go rand
- > wait 5
- > plan a

Known commands:

help	show this screen
id which	display the name of the group that is operated on
load [<file>]	load a set of interpreted commands from a file
save [<file>]	save the currently known variables as a set of commands
use <name>	switch to using the group named <name> (and load it if necessary)
use groups	show the group names that are already loaded
vars	display the names of the known states
show	display the names and values of the known states
show <name>	display the value of a state
record <name>	record the current joint values under the name <name>
delete <name>	forget the joint values under the name <name>
current	show the current state of the active group
constrain <name>	use the constraint <name> as a path constraint
constrain	clear path constraints
eef	print the name of the end effector attached to the current group
go <name>	plan and execute a motion to the state <name>
go <dir> <dx>	plan and execute a motion in direction up down left right forward backward
go rand	plan and execute a motion to a random state
plan <name>	plan a motion to the state <name>
execute	execute a previously computed motion plan
rotate <x> <y> <z>	plan and execute a motion to a specified orientation (about the X,Y,Z axes)
tolerance	show the tolerance for reaching the goal region
tolerance <val>	set the tolerance for reaching the goal region
wait <dt>	sleep for <dt> seconds
x = y	assign the value of y to x
x[idx] = val	assign a value to dimension idx of x
x = [v1 v2...]	assign a vector of values to x
trace <on off>	enable/disable replanning or looking around
ground	add a ground plane to the planning scene
allow replanning <true false>	enable/disable replanning
allow looking <true false>	enable/disable looking around

"move_group" Python Interface

```
group = moveit_commander.MoveGroupCommander("left_arm")
```

```
pose_target = geometry_msgs.msg.Pose()
```

```
pose_target.orientation.w = 1.0
```

```
pose_target.position.x = 0.7
```

```
pose_target.position.y = -0.05
```

```
pose_target.position.z = 1.1
```

```
group.set_pose_target(pose_target)
```

```
plan1 = group.plan()
```

"move_group" C++ Interface

```
moveit::planning_interface::MoveGroup group("right_arm");
```

```
geometry_msgs::Pose target_pose;
```

```
target_pose.orientation.w = 1.0;
```

```
target_pose.position.x = 0.28;
```

```
target_pose.position.y = -0.7;
```

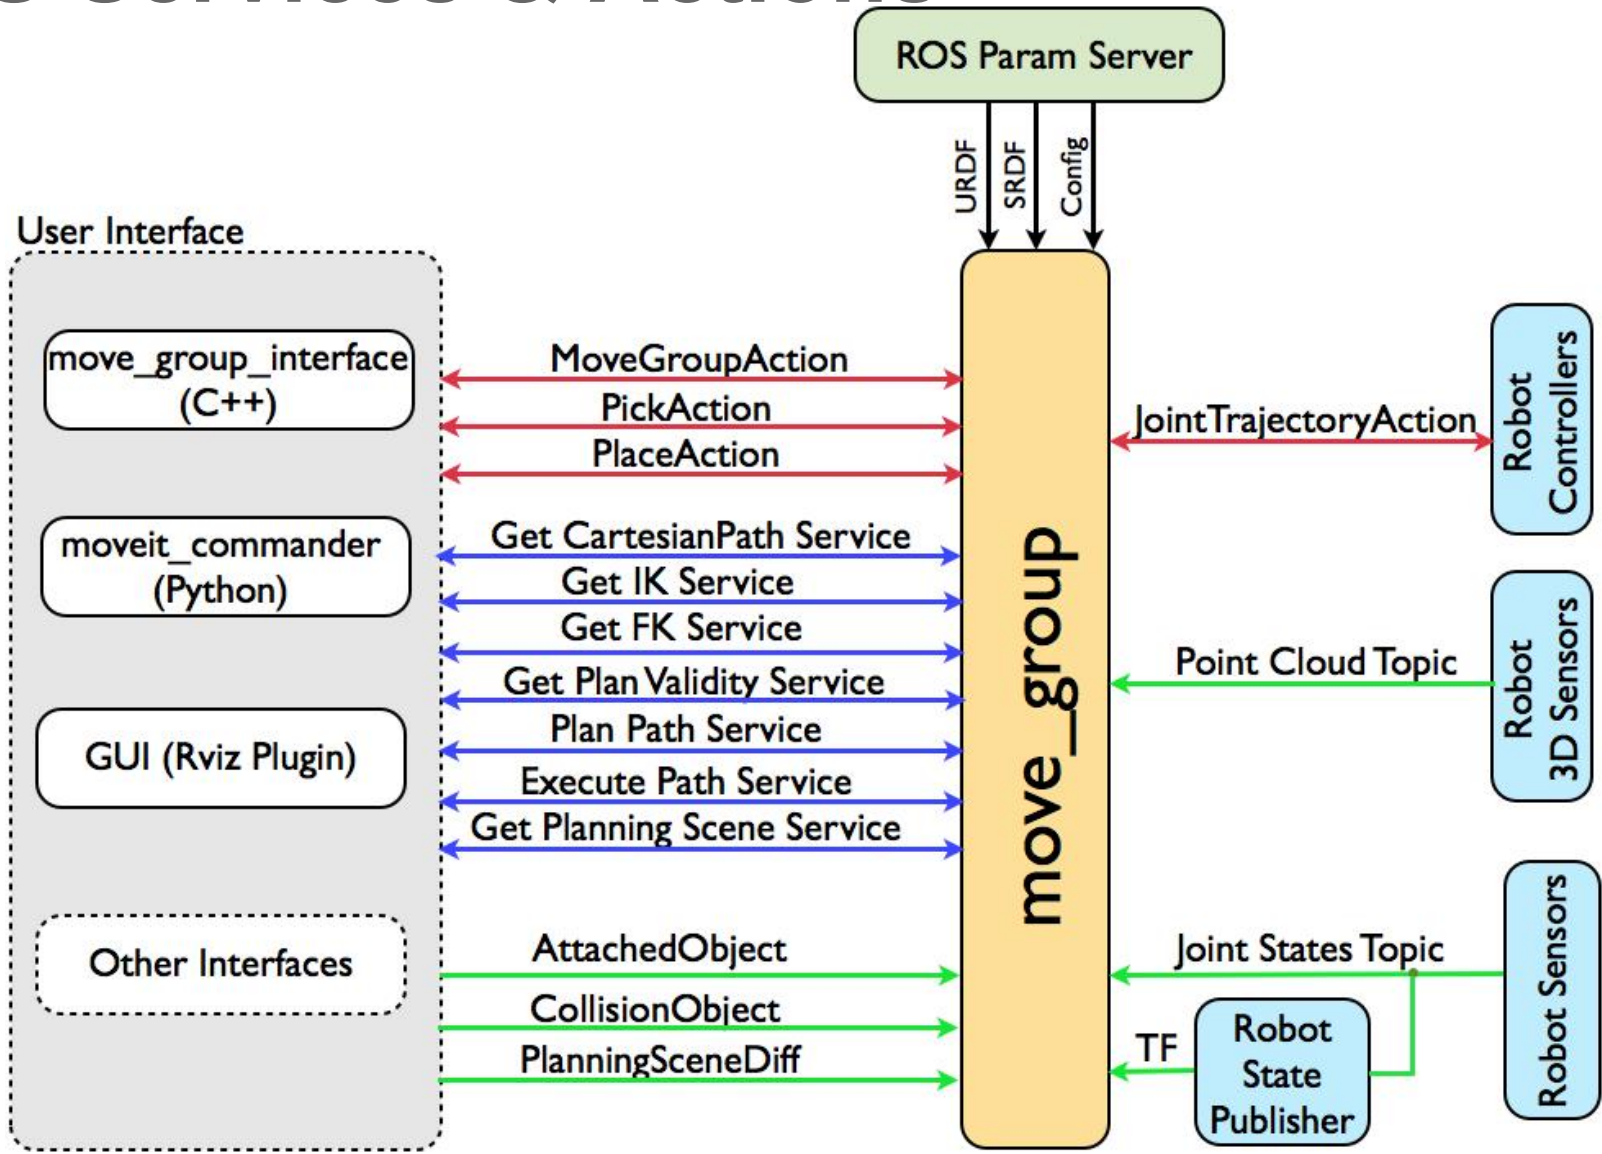

```
target_pose.position.z = 1.0;
```

```
group.setPoseTarget(target_pose);
```

```
moveit::planning_interface::MoveGroup::Plan my_plan;
```

```
bool success = group.plan(my_plan);
```

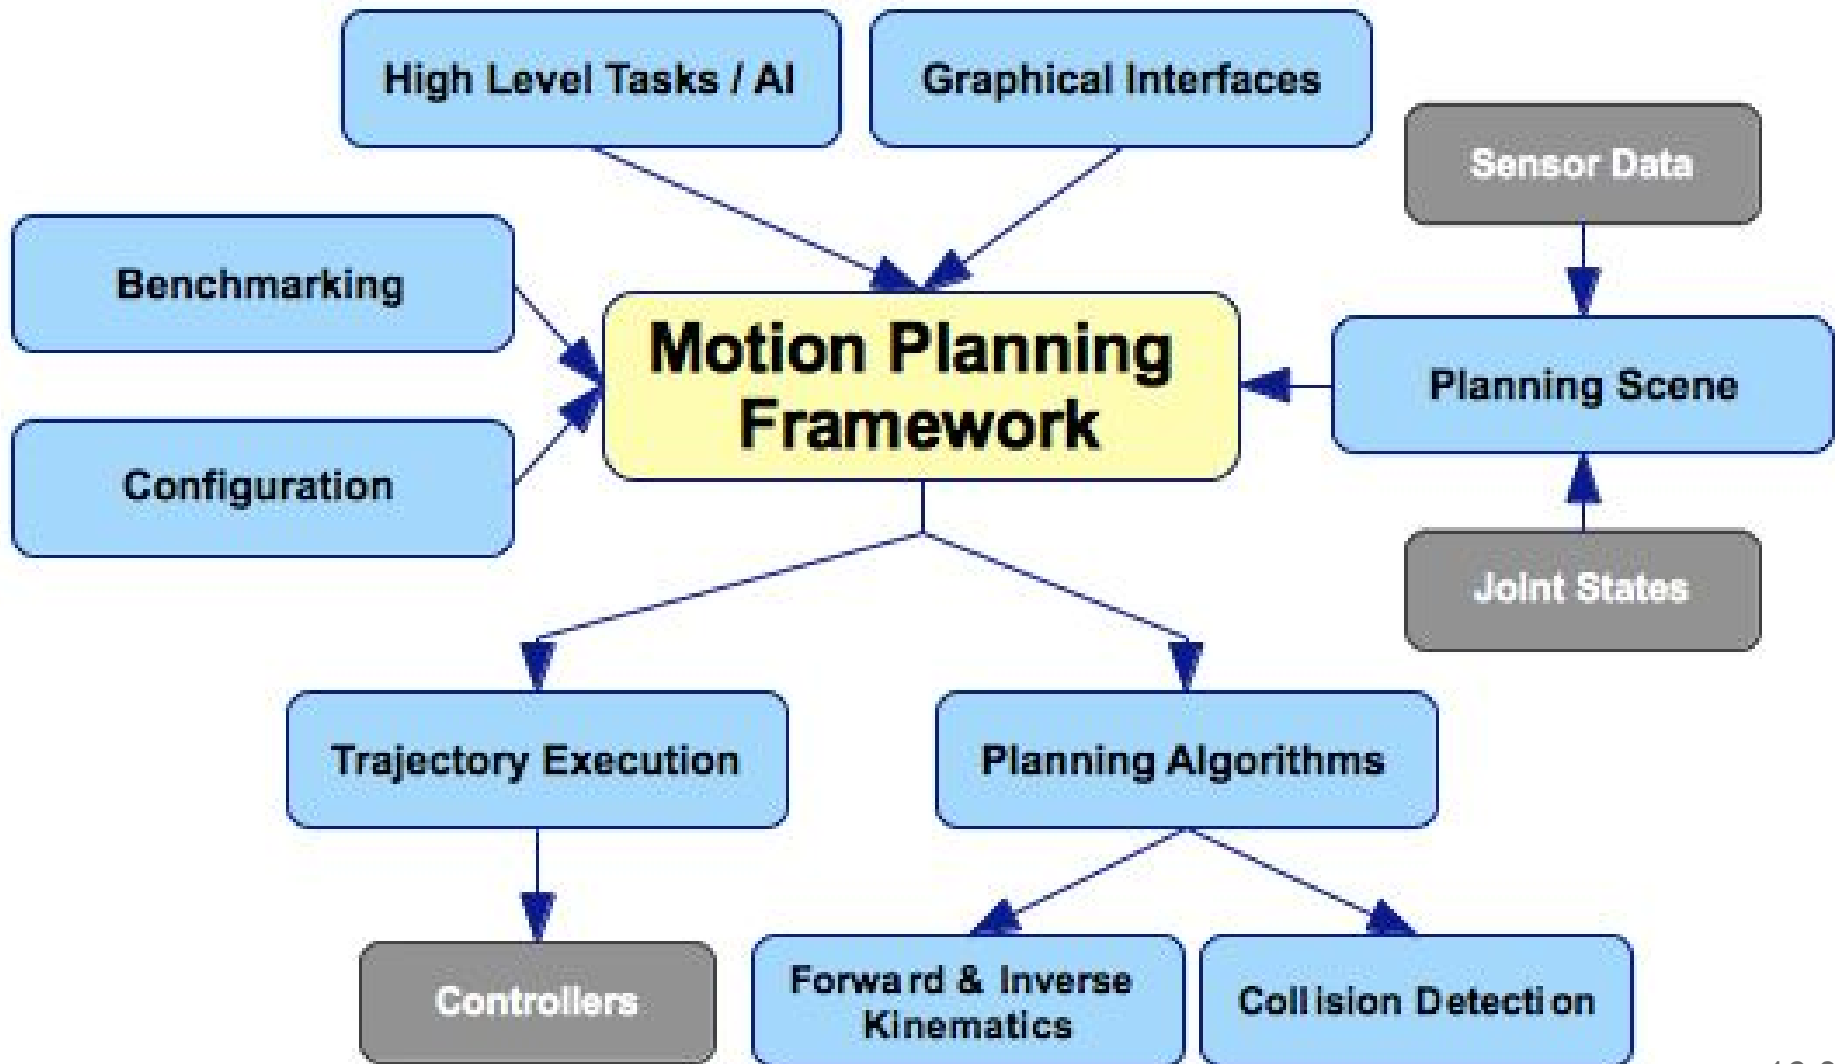

ROS Services & Actions

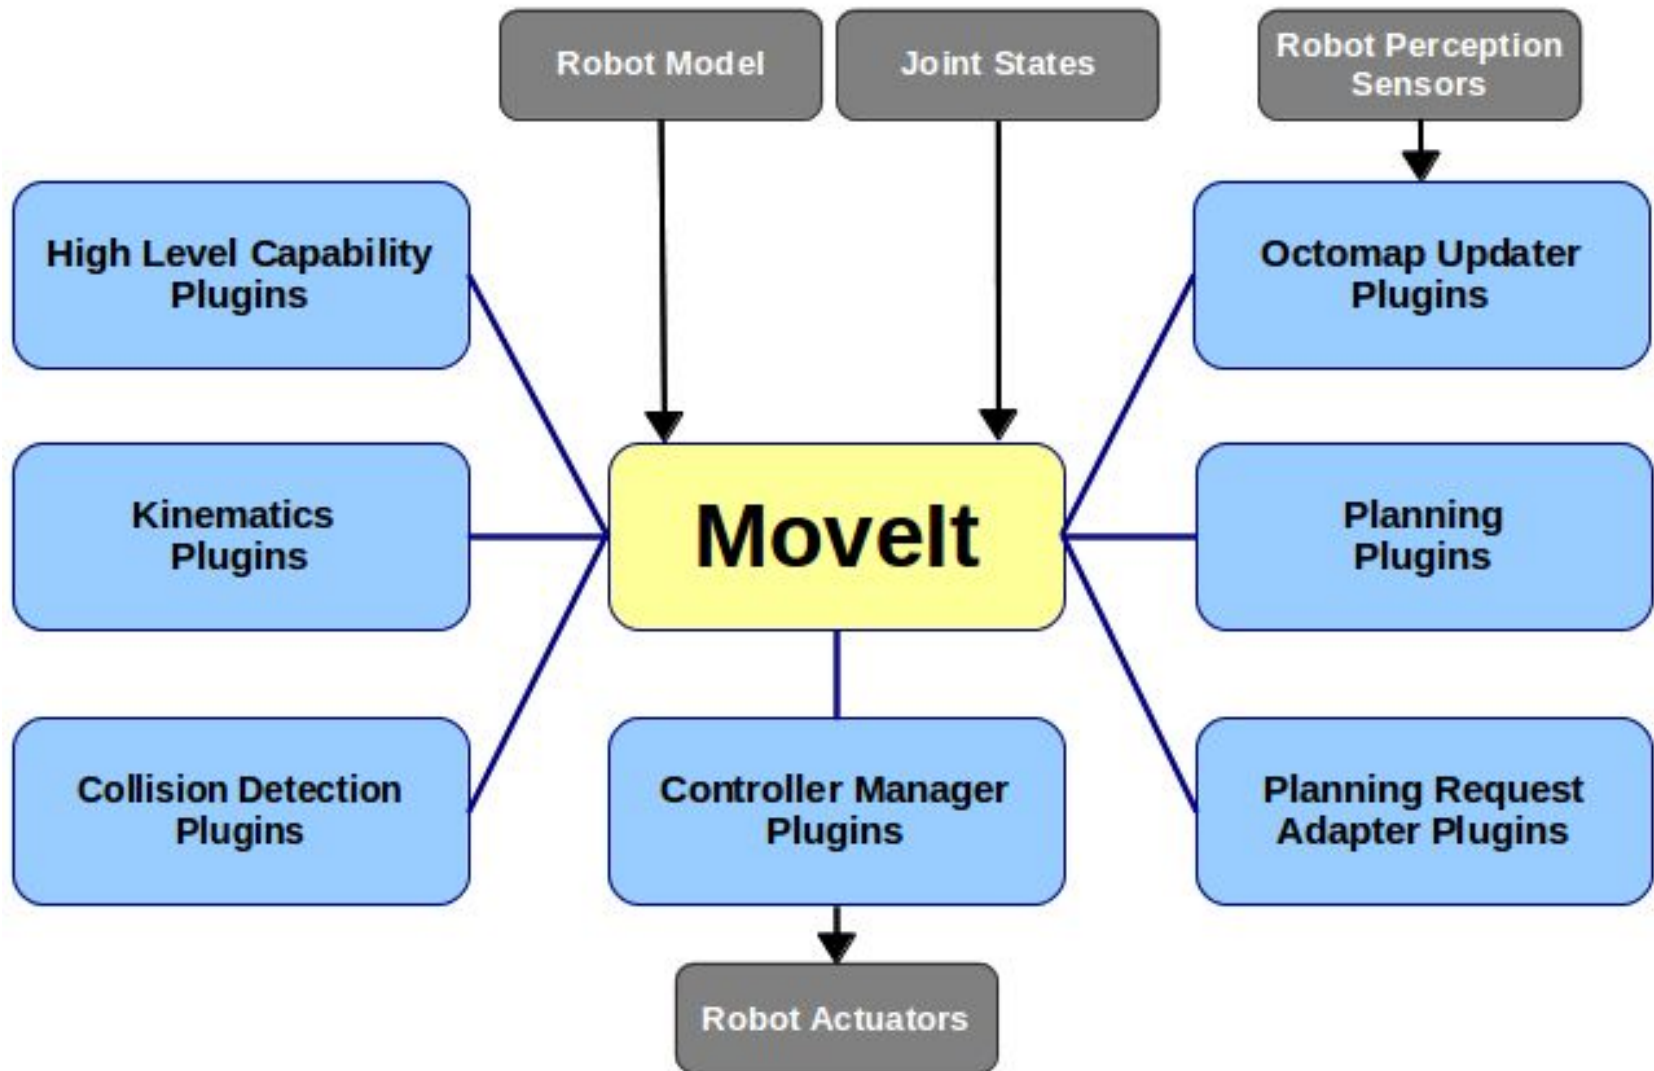

Pro-Tip: Use C++ classes individually

```
robot_model_loader_.reset(new robot_model_loader::RobotModelLoader("robot_description"));
robot_model_ = robot_model_loader_>getModel();
planning_scene_.reset(new planning_scene::PlanningScene(robot_model_));
tf_.reset(new tf::TransformListener(nh_));
psm_.reset(new planning_scene_monitor::PlanningSceneMonitor(
    planning_scene_, robot_model_loader_, tf_, "my_scene"));
psm_->startStateMonitor("/joint_states", "");
psm_->startPublishingPlanningScene(planning_scene_monitor::PlanningSceneMonitor::
    UPDATE_SCENE, "my_planning_scene");
visuals_tools_.reset(new MoveItVisualTools(robot_model_, planning_scene_monitor_));
planning_pipeline_.reset(new planning_pipeline::PlanningPipeline(robot_model_ nh_,
    "planning_plugin", "request_adapters"));
trajectory_execution_manager_.reset(new trajectory_execution_manager::
    TrajectoryExecutionManager(robot_model_));
```

Demystifying Complexity 5min

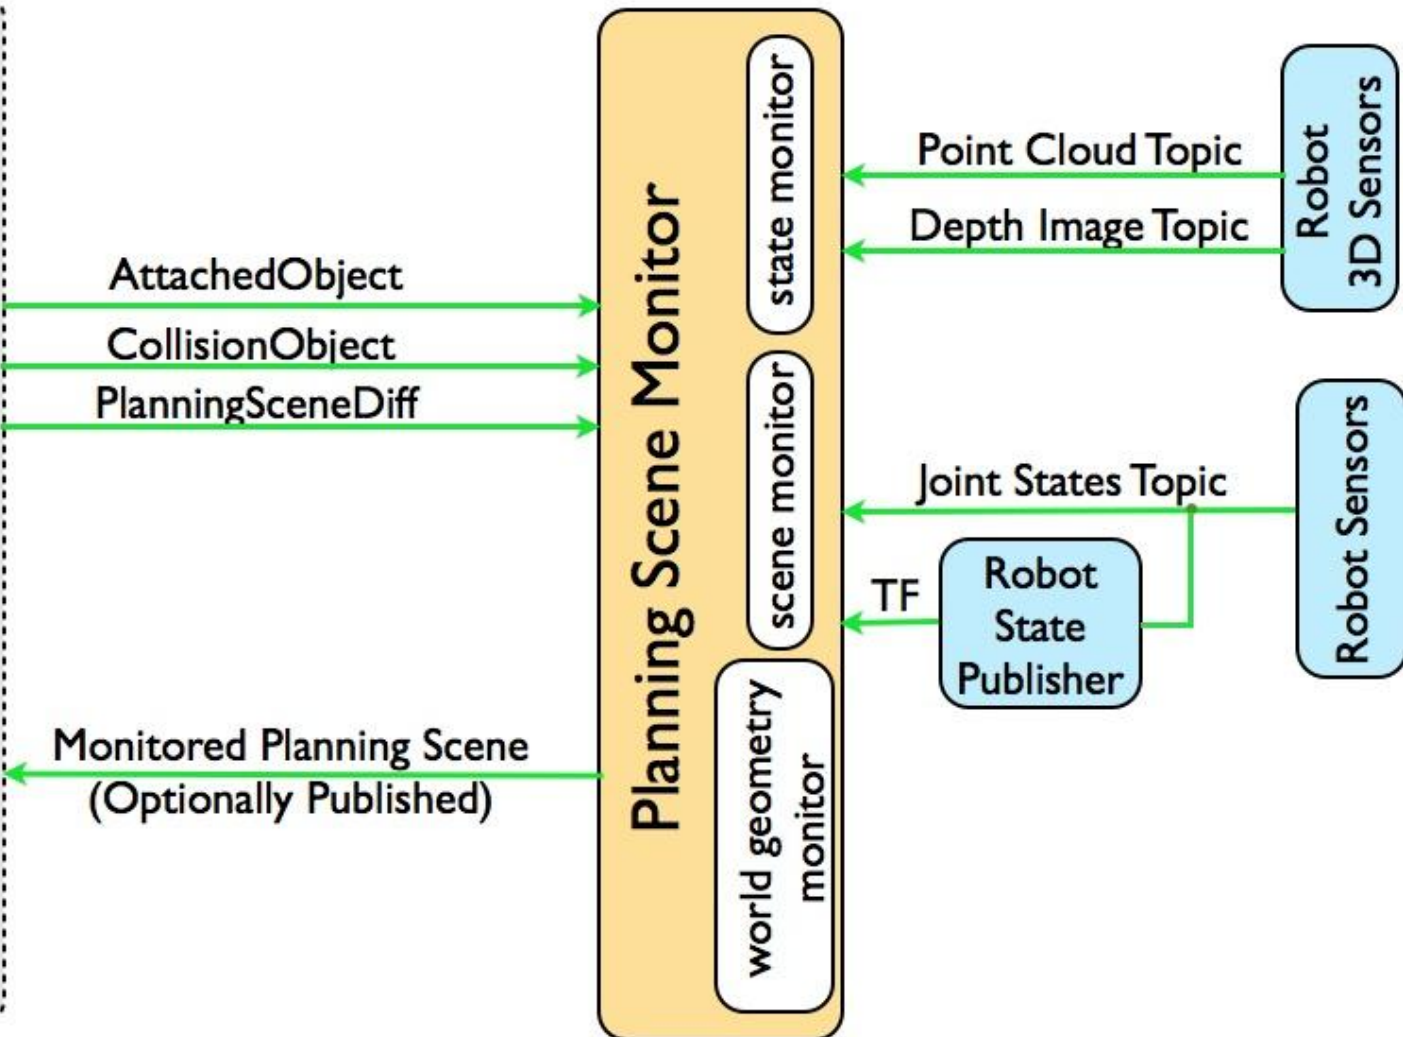

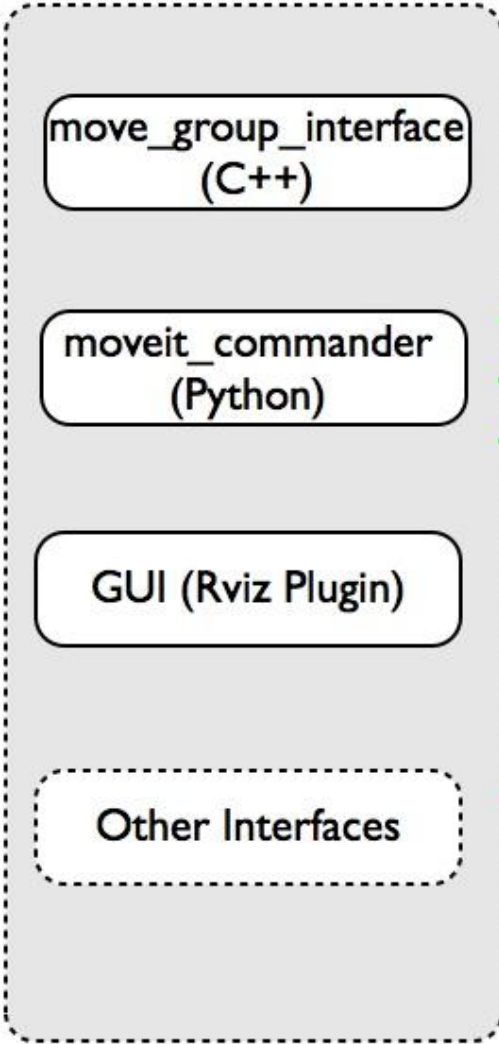

Many Plugins

Planning Scene Monitor

User Interface

Planners

OMPL

- Lydia Kavraki's lab
- Sampling-based planners
- Stochastic
- Probabilistically complete
- Typically no optimality guarantees
- Computationally fast
- More reliable runtime for real-world applications
- Many variants of algorithms available

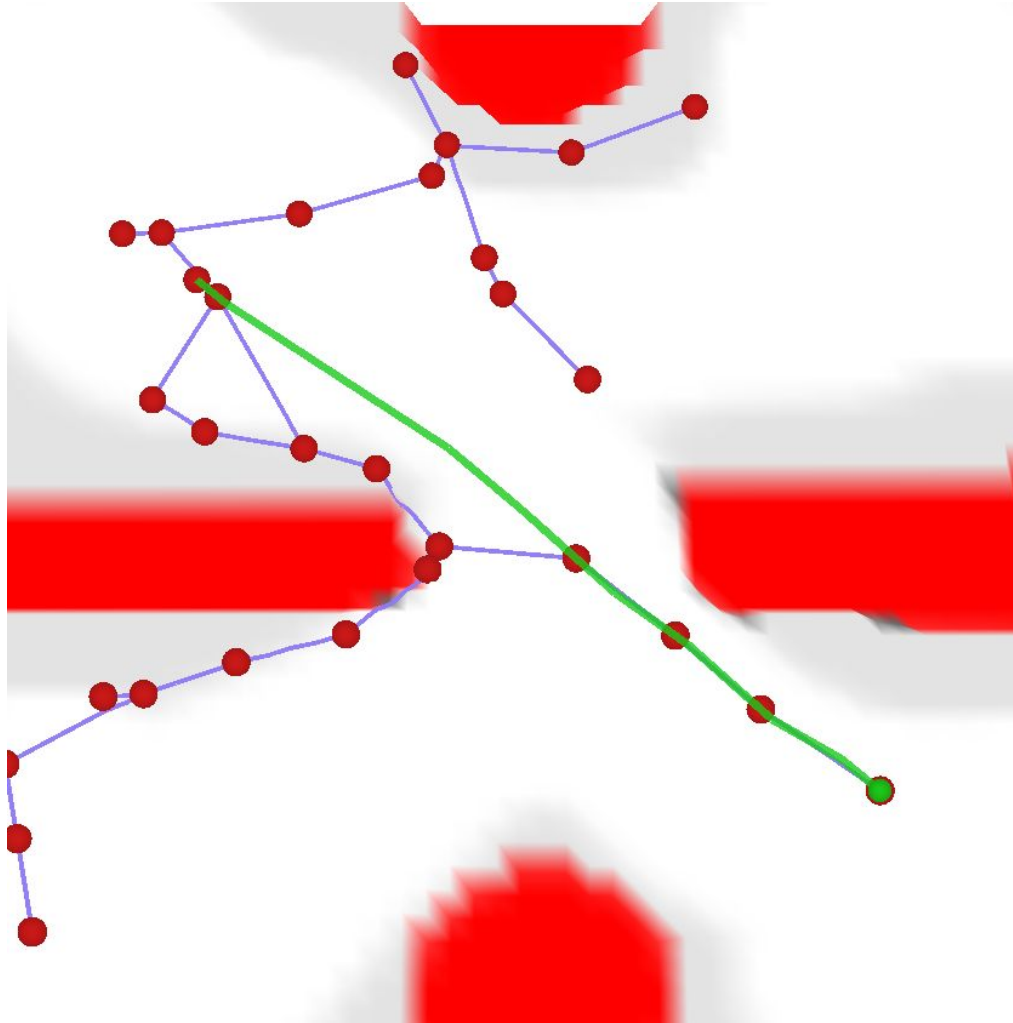

SBPL

- Maxim Likhachev's lab
- Graph-based planners
- Deterministic
- Resolution complete
- Optimality guarantees
- Requires pre-processing phase
- Computationally expensive
- More reliable solutions for real-world applications
- Renewed work from Michael Ferguson

CHOMP/STOMP

- Kalakrishnan et al
- Optimization-based planner that generates smooth well behaved collision free motion paths in reasonable time
- Can incorporate additional objective functions - collision avoidance and smoothness
- CHOMP being resurrected by ROS Industrial group

Experience Planners

Planner Request Adapters

- **AddTimeParameterization**
 - Modifies the timestamps of a kinematic (position-based) trajectory to respect velocity and acceleration constraints
 - Uses iterative parabolic time parameterization
- **FixWorkspaceBounds**
 - If no minimum workspace bounds is specified, sets to a default
- **FixStartStateBounds**
 - Tweaks joints to not be outside joint limits
 - Accounts for floating point and encoder noise
- **FixStartStateCollision**
 - Tweaks start state to not be in collision with environment
 - Creates a new planning request with modified start state
- **FixStartStatePathConstraints**
 - Plans separate path from invalid start state to valid start state

Adapts research theory to real world hardware

IK Solvers

- KDL
 - Kinematics Dynamics Library, OROCOS
- IKFast
 - OpenRave Analytical
- Robot-specific custom solvers
 - PR2

Amazon Picking Challenge 5min

Workspace Analysis

Baxter Parallel Electric Gripper

Yale OpenHand 3-Finger Gripper

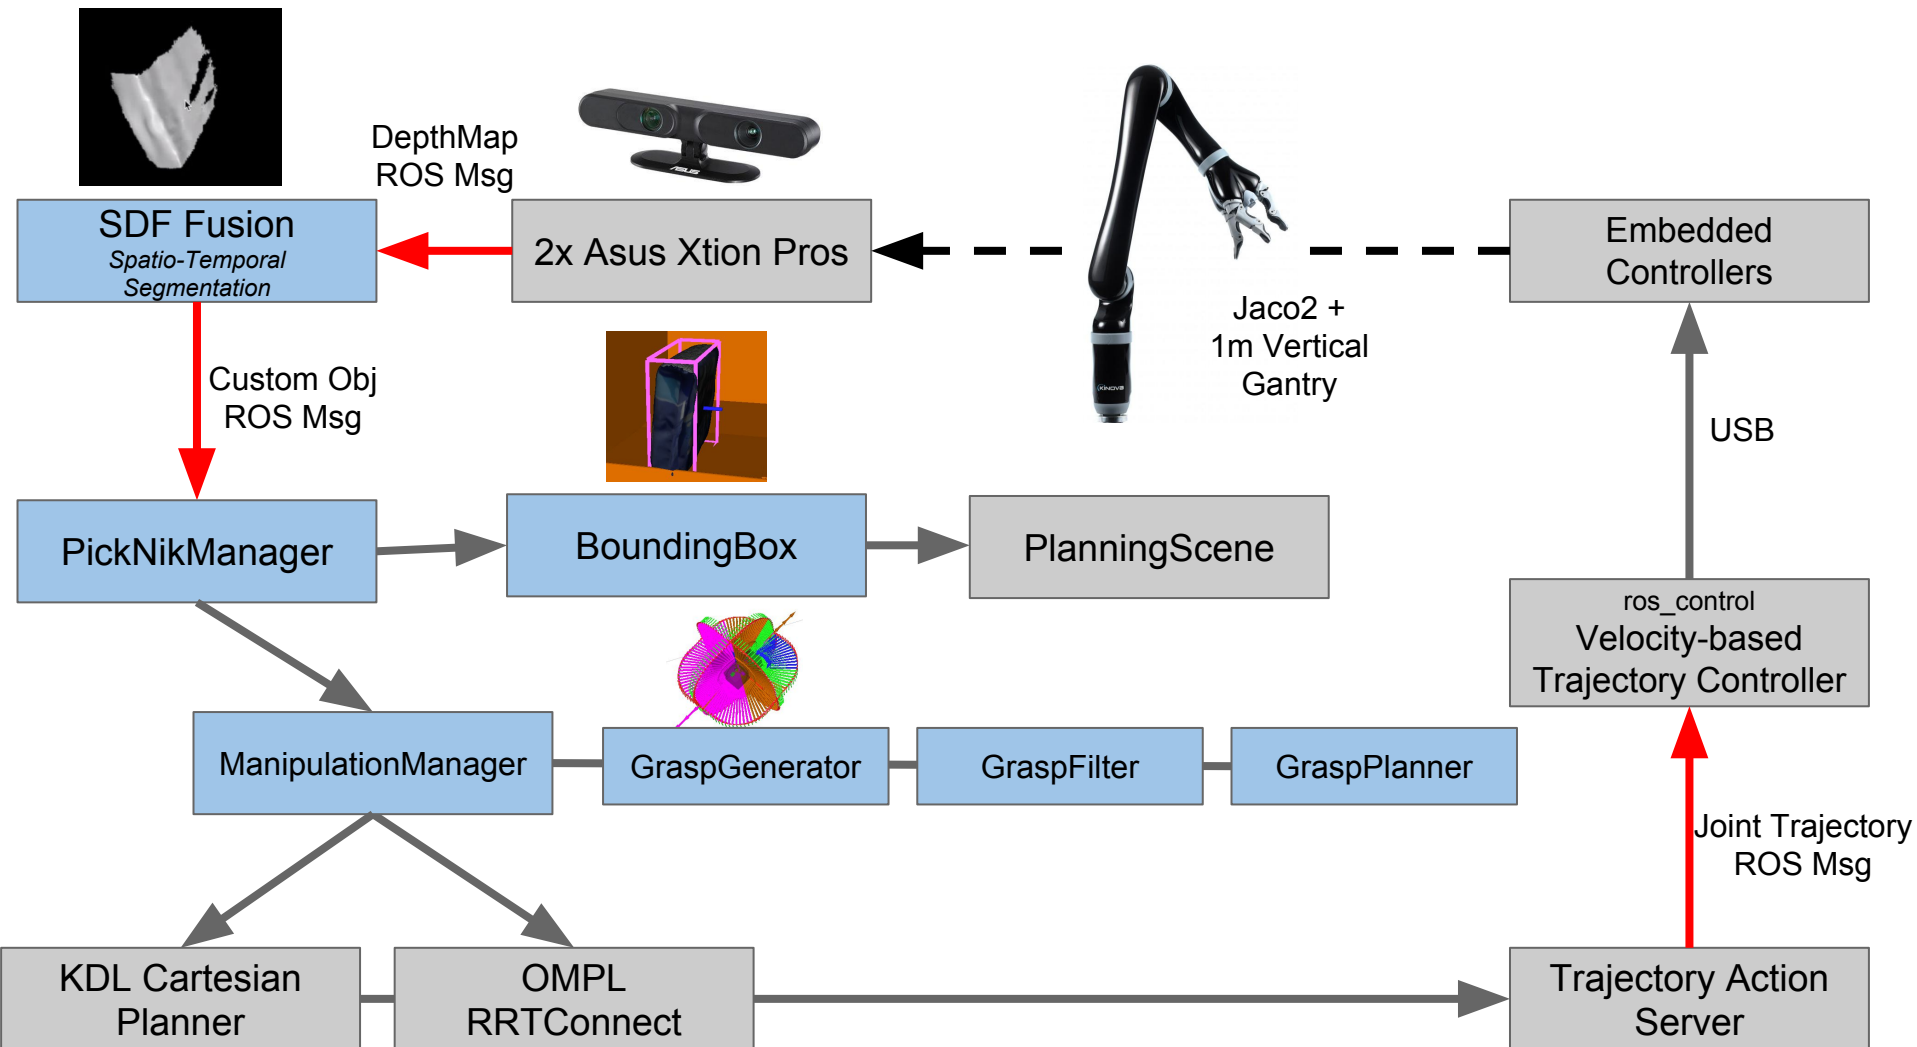

Kinova Jaco2 + 1m Vertical Gantry

PickNik Architecture

(Pretty Standard)

Challenge Takeaways

- Simplest possible grasping → suction
- Low cost hardware → visual servoing
- Reduce calibration needs
- 2 mobile bases won → larger workspace
- Slim arms → better reachability
- Good visualizations → introspection and development
- Perception and manipulation teams must work closely
- Test whole system working together often

Movelt! used by at least 10 teams:

- PickNik, Z.U.N., University of Washington, Team IntBot, NUS_SMART_HAND, Team Applied Robotics, Team WPI, University of Alberta Team, Plocka Packa, Team CVAP

None of the winning teams used Movelt!

Team RBO - 1st Place

TU Berlin

148 points

Barrett WAM arm

- Backdrivability key to skillful interactions with the environment

Nomadic XR4000 mobile base

- Omnidirectional / holonomic
- Very large workspace

Did not rely on motion planning

Hybrid automaton composed of sequences of controllers with sensor-based transitions.

Vacuum attachment tool with suction cup drilled into side of fender

“Simple but robust” RGB object recognition algorithm

Team MIT - 2nd Place

MIT

88 points

ABB 1600ID

- Sub-millimeter precision
- Internal canals for cables

Custom dual-purpose end effector

- Aviation-grade aluminum
- Spatula-like finger nail
- Suction also

Used MIT Drake (Locomotion Group at MIT) for motion planning

Automatically chooses which motion primitive to use based on dynamics simulator

- **grasp, suck, scoop, toppling, push-rotate**

Kinect2 cameras mounted on frame, Realsense on arm

Outsourced perception to a robotics startup - Caspen Robotics

Team Grizzly - 3rd Place

Oakland University
w/Dataspeed Inc.
35 points

- Rethink Baxter
- Custom Mobile Base
- Yale OpenHand
- Suction gripper
- Kinect2 on Head

**Custom Cartesian motion
planning algorithm accepted
position and orientation
commands from the perception
system**

Where Movelt! needs improvement 4min

(and where you can help!)

Motion Planner Reliability

- Sometimes fails with difficult to understand explanations
- Sometimes generates very suboptimal paths

Solutions:

- Hybridize several planning attempts (threads)
- Plan with cost functions, e.g. RRT*, PRM*
- Increase the time MoveIt! spends on smoothing paths
- For some applications, planners other than OMPL's defaults are better
- Improve user feedback to diagnose setup issues
 - Check your joint space is parameterized correctly ($<2\pi$)
 - Introspection tools

Obstacle Clearance

Can generate plans that come very close to obstacles

Solutions:

- Add out of box support for biasing trajectories away from obstacles
- Cost-based OMPL, STOMP, CHOMP

Grasping Support

Difficult to generate grasps in MoveIt!

Solution:

- Provide default URDF + SRDF compatible grasp generator
- Clearer documentation on how to integrate third party grasping pipeline

Documentation

- Need more exhaustive documentation from community support (*you!*)
- Tutorials for how to use Movelt! beyond quick start demo
- Make it easier for our many users to contribute back

Future Roadmap 10min

Community meeting's end of year goals

- Integrate better support for humanoid kinematics
- Integrate benchmarks updates
- Resurrect support for other types of planners (STOMP)

Visual Servoing Support

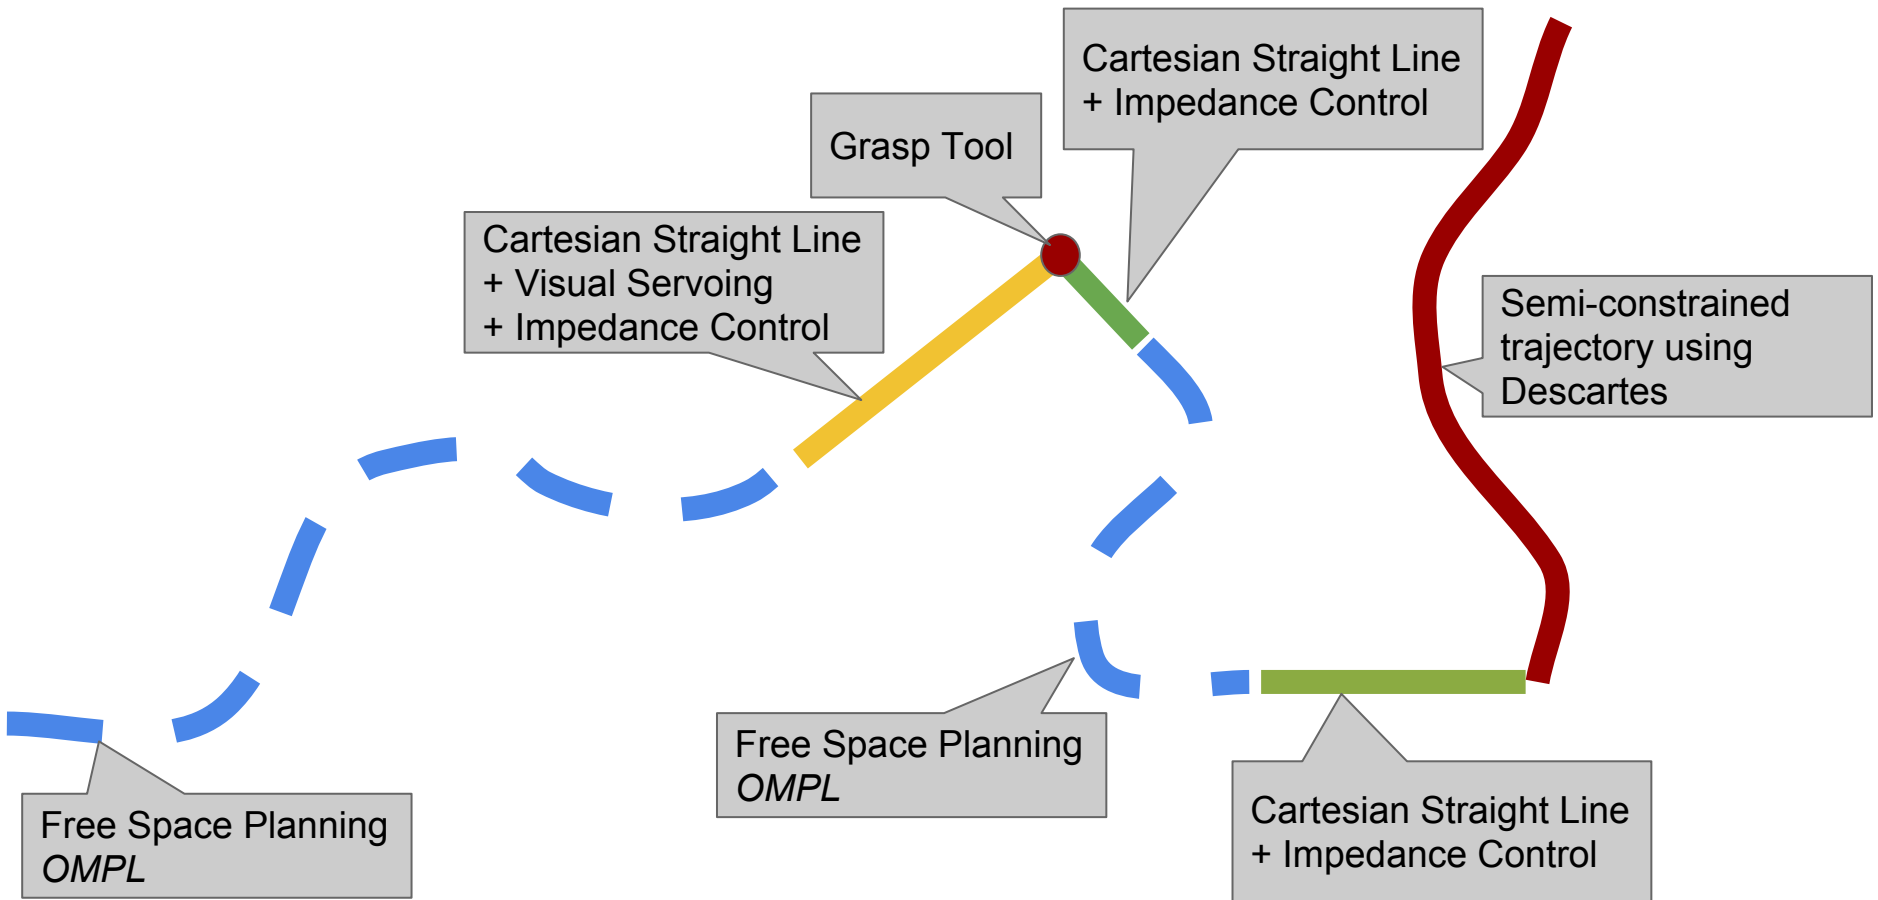

- Once a trajectory is planned, no easy way to integrate visual or tactile feedback

Solution:

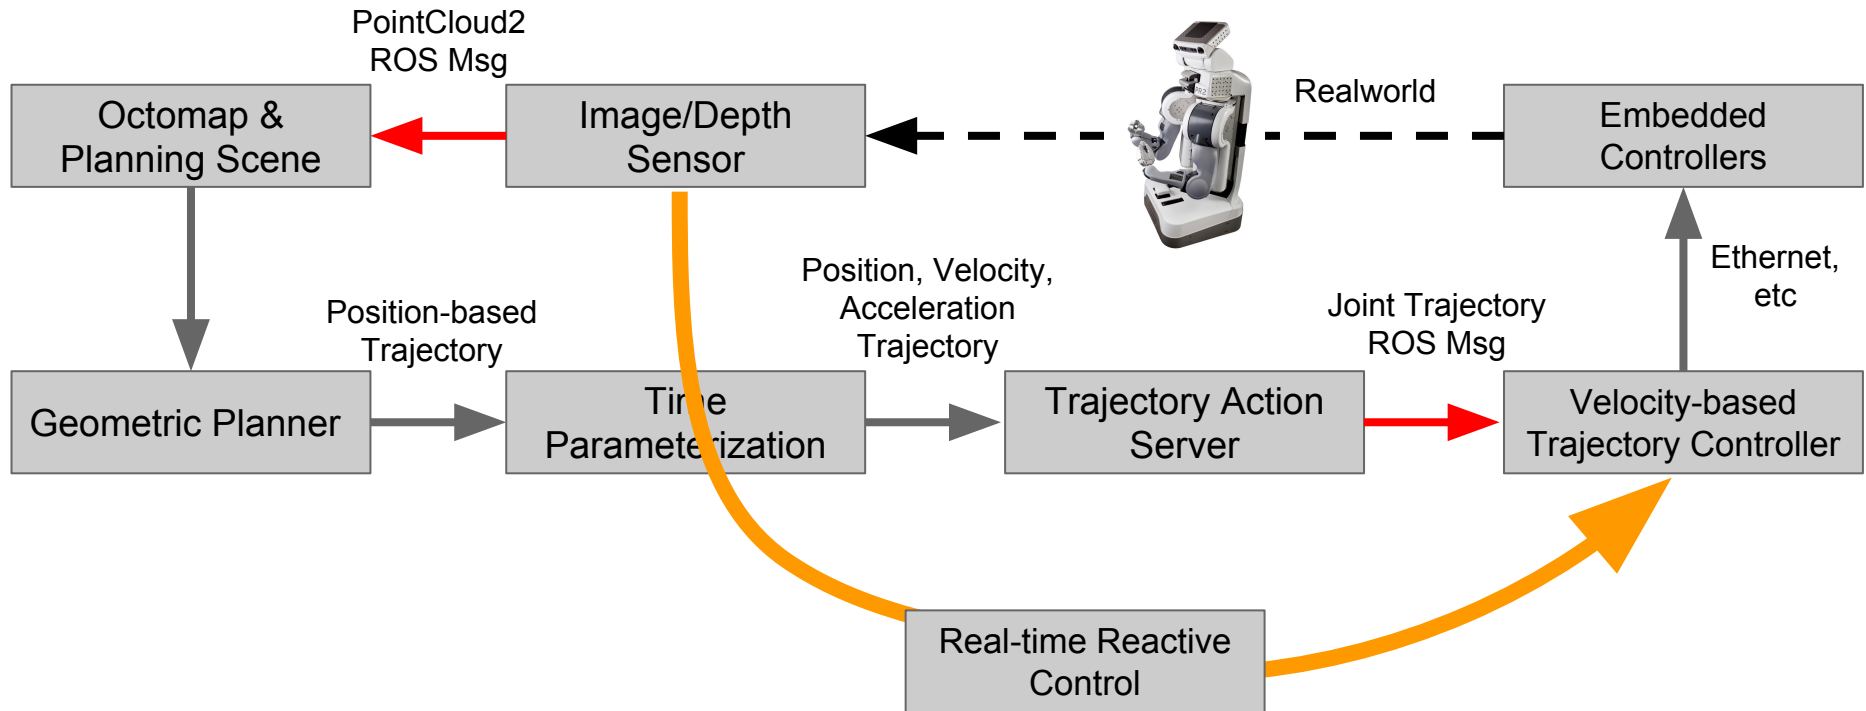

- Position/pose-based visual servoing (PBVS)
- Hooks to modify plan based on alignment of target object
- Ability to add meta-data to trajectories indicating when to use VS, what objects to track
- Requires much tighter coupling with controllers, planners, and perception system

Planning with Behaviors

Sense-Plan-Act & ROS Control

- Faster connection for streaming commands
- Integrate `ros_control` with Setup Assistant
- Rename Movelt ControllerManager to *ControllerInterface*
- More advanced plugin than SimpleControllerManager
- Switching controllers

Affordance Templates

Human in the loop tools for high level commands such as more sophisticated interactive markers

Calibration

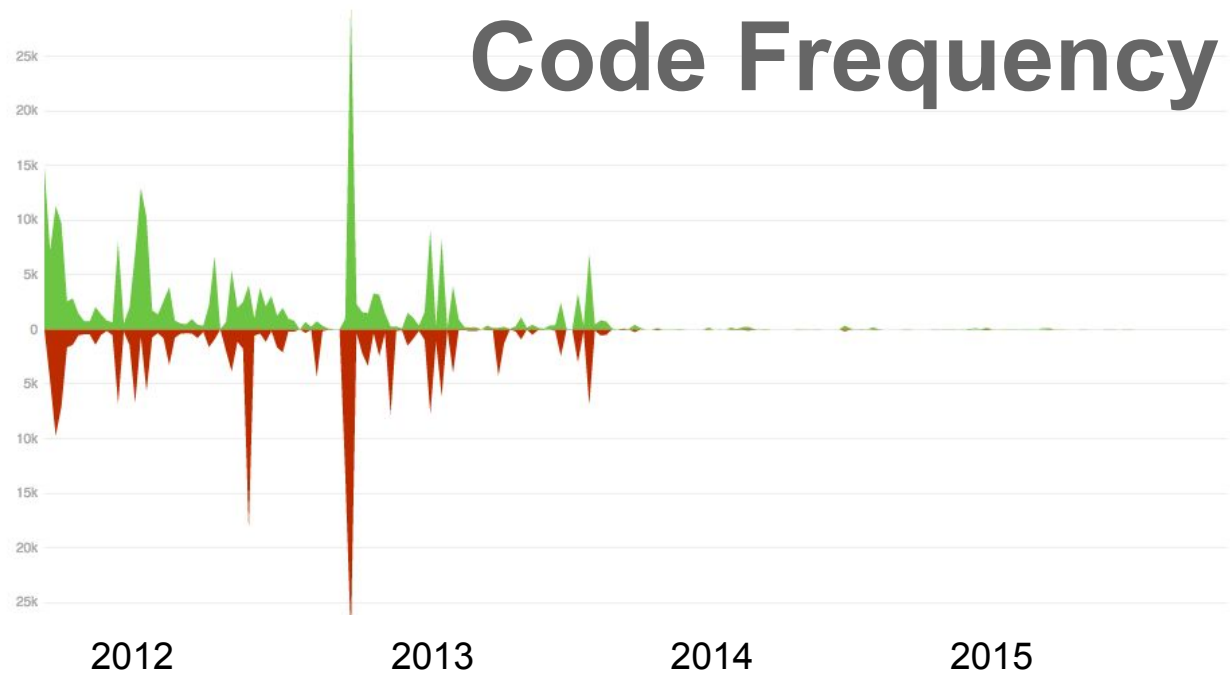

- Integrate better calibration packages
 - ROS Industrial - [industrial_calibration](#)
 - Fetch Robotics - [robot_calibration](#)
- More clearly document how this should be integrated

Code Frequency

moveit_core

moveit_ros

Stability vs. Progress

- Movelt! needs to stay current
- Other motion planning frameworks are very capable
 - OpenRave, MIT Drake, MuJuCo + Whole Body Planning, etc

Distributed Software Collaboration Is Hard

- Currently we have 50 open pull requests
- Need continuous integration badly
- Need more simulation tests

If there are good features worth upgrading to, breaking changes are tolerable.

Proposal: Consolidate to One Repo

ros-planning / [moveit_ros](#)

Unwatch 29 Unstar 31 Fork 92

Inconsistent moveit_ros and moveit_msgs with Indigo?
#615

Extends [#594](#) to allow connection to remote warehouse db.

Goes with [ros-planning/warehouse_ros#24](#)

Conversation 0 Commits 1 Files changed 3

 TheBrewCrew commented on Aug 14

This enables the changes in [ros-planning/moveit_core#255](#) by adding a ROS param (/move_group/octomap_diff) to enable change detection on the Octomap. This pull request should build without [ros-planning/moveit_core#255](#) but will not do anything until it is merged.

	world fix	a year ago

Overall

- Movelt! is awesome
- Successful because it is easy for beginners
- Needs many more features and improvements
- Stability (stagnation) should not be the #1 focus
- Please contribute!

Q & A 5min

Do you like to Movelt Movelt?

Thanks to Mike Ferguson, Sachin Chitta, Ioan Sukan, Shaun Edwards, Jon Bohren, Conor Brew, Acorn Pooley, Dave Hershberger, Chris Lewis, Jorge Nicho, Ben Chretien, Adolfo Rodriguez, Kei Okada, Stefan Kohlbrecher, and many more...
