RCLCPP Parameters

Part 1

Getting Started

```cpp
int main(int argc, char ** argv)
{
  rclcpp::init(argc, argv);

  auto node = std::make_shared<rclcpp::Node>("minimal_param_node");
  auto my_string = node->declare_parameter("my_string", "world");
  auto my_number = node->declare_parameter("my_number", 23);

  rclcpp::spin(node);
  rclcpp::shutdown();
}
```

3

Parameter Struct

```cpp
struct Params {
  std::string my_string = "world";
  int my_number = 23;
};
```

Parameter Struct

```cpp
struct Params {
  std::string my_string = "world";
  int my_number = 23;
};

int main(int argc, char ** argv)
{
  rclcpp::init(argc, argv);
  auto node = std::make_shared<rclcpp::Node>("minimal_param_node");
  auto params = Params{};
  params.my_string = node->declare_parameter("my_string", params.my_string);
  params.my_number = node->declare_parameter("my_number", params.my_number);

  rclcpp::spin(node);
  rclcpp::shutdown();
}
```

5

ParameterDescriptor

```cpp
auto param_desc  = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Mine!";
param_desc.additional_constraints  = "One of [world, base, home]";
params.my_string = node->declare_parameter("my_string",
  params.my_string, param_desc);
```

ParameterDescriptor

```cpp
auto param_desc  = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Mine!";
param_desc.additional_constraints  = "One of [world, base, home]";
params.my_string = node->declare_parameter("my_string",
  params.my_string, param_desc);
param_desc  = rcl_interfaces::msg::ParameterDescriptor{};
param_desc.description = "Who controls the universe?";
param_desc.additional_constraints  = "A multiple of 23";
params.my_number = node->declare_parameter("my_number",
  params.my_number, param_desc);
// ...
```

Validation

```cpp
auto const _ = node->add_on_set_parameters_callback(
  [](std::vector<rclcpp::Parameter> const& params)
  -> rcl_interfaces::msg::SetParametersResult {
```

Validation

```cpp
auto const _ = node->add_on_set_parameters_callback(
  [](std::vector<rclcpp::Parameter> const& params)
  -> rcl_interfaces::msg::SetParametersResult {
    for (auto const& param : params) {
      if(param.get_name() == "my_string") {
        auto const value = param.get_value<std::string>();
```

9

Validation

```cpp
auto const _ = node->add_on_set_parameters_callback(
  [](std::vector<rclcpp::Parameter> const& params)
  -> rcl_interfaces::msg::SetParametersResult {
    for (auto const& param : params) {
      if(param.get_name() == "my_string") {
        auto const value = param.get_value<std::string>();
        auto const valid = std::vector<std::string>{"world", "base", "home"};
        if (std::find(valid.cbegin(), valid.cend(), value) == valid.end()) {
          auto result = rcl_interfaces::msg::SetParametersResult{};
          result.successful = false;
          result.reason = std::string("my_string: {")
            .append(value)
            .append("} not one of: [world, base, home]");
          return result;
        }
```

10

Copy Pasta

- parameter name: 6 separate copies
- declaration: re-init description for each parameter
- validation: convert vector to map

30 lines of C++ boilerplate per parameter

30 lines of C++ boilerplate per parameter
Before handling of dynamic parameters

generate_parameter_library

Part 2

13

YAML

```yaml
minimal_param_node:
    my_string: {
        type: string,
        description: "Mine!",
        validation: {
            one_of<>: [["world", "base", "home"]]
        }
    }
    my_number: {
        type: int,
        description: "Mine!",
        validation: {
            multiple_of_23: []
        }
    }
```

14

Validation

```
~/ws$ ros2 run ...
terminate called after throwing an instance of
   'rclcpp::exceptions::InvalidParameterValueException'

what():  Invalid value set during initialization for parameter 'my_string':
   Parameter 'my_string' with the value 'place' is not in the set
      '[world, base, home]'
```

```
~/ws$ ros2 param set /node_name my_string "hello"
Setting parameter failed: Parameter 'my_string' with the value 'hello' is
   not in the set '[world, base, home]'
```

CMake Module

```cmake
find_package(generate_parameter_library REQUIRED)

generate_parameter_library(
  minimal_param_node_parameters
  src/minimal_param_node.yaml
)

add_executable(minimal_node src/minimal_param_node.cpp)
target_link_libraries(minimal_node PRIVATE
  rclcpp::rclcpp
  minimal_param_node_parameters
)
```

```cpp
#include <rclcpp/rclcpp.hpp>
#include "minimal_param_node_parameters.hpp"

int main(int argc, char * argv[])
{
  rclcpp::init(argc, argv);
  auto node = std::make_shared<rclcpp::Node>("minimal_param_node");
  auto param_listener =
    std::make_shared<minimal_param_node::ParamListener>(node);
  auto params = param_listener->get_params();

  // ...
```

Built-In Validation Functions

- bounds (inclusive)
- less than
- greater than
- less than or equal
- greater than or equal

Built-In Validation Functions

- bounds (inclusive)
- less than
- greater than
- less than or equal
- greater than or equal
- fixed string/array length
- size of string/array length greater than
- size of string/array length less than
- array contains no duplicates
- array is a subset of another array
- bounds checking for elements of an array

Custom Validation

```cpp
#include <rclcpp/rclcpp.hpp>
#include <fmt/core.h>
#include <tl_expected/expected.hpp>

tl::expected<void, std::string> multiple_of_23(
    rclcpp::Parameter const& parameter) {
  int param_value = parameter.as_int();
    if (param_value % 23 != 0) {
        return tl::make_unexpected(fmt::format(
            "Invalid value '{}' for parameter {}. Must be multiple of 23.",
            param_value, parameter.get_name()));
    }
  return {};
}
```

Other Killer Features

- Dynamic parameters
- Generation of RCLPY Parameter Libraries
- Generation of Markdown Docs
- Examples and docs at
  github.com/PickNikRobotics/generate_parameter_library
- Released on Humble, Iron, and Rolling

Boring?

Part 3

Why so many parameters?

- Users use defaults for most parameters

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values

24

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially

Why so many parameters?

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially
- The more complex your interface the less useful your abstraction

24

Why so many parameters?

PICKNIK

- Users use defaults for most parameters
- Authors only test default values
- Permutations of parameters grow exponentially
- The more complex your interface the less useful your abstraction
- Resist the urge to expose interior details as parameters

What is a good parameter?

- Express user intent (latency or throughput)

What is a good parameter?

- Express user intent (latency or throughput)
- Details like buffer sizes scale with hardware

What is a good parameter?

- Express user intent (latency or throughput)
- Details like buffer sizes scale with hardware
- Leave the door open to improvements in behavior for the user

Questions?
